Copilot

Agent 365

Fabric Platform
GitHub Copilot with Fabric Skills
aka.ms/skills-for-fabric

Announcing

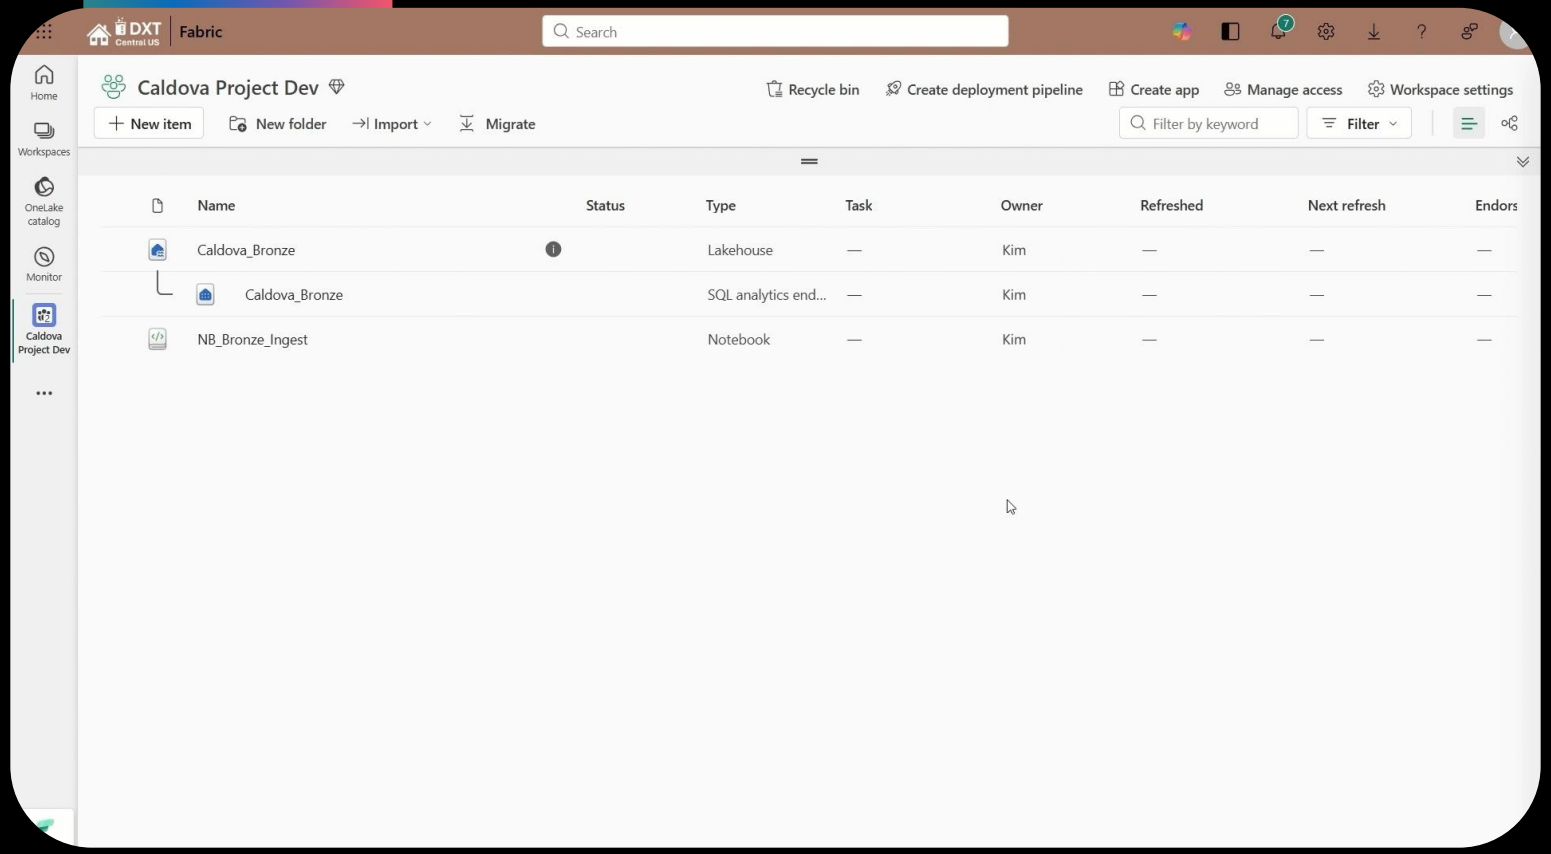

Copilot in Fabric

A new, unified AI companion for the complete data lifecycle

Copilot in Fabric: New and Unified

A single AI companion for the complete data lifecycle

Private preview

One Copilot, all workloads

Build with a single surface, not a patchwork of point tools

Wherever you build

Stay in Fabric or connect from your IDE or CLI of choice

Persistent memory

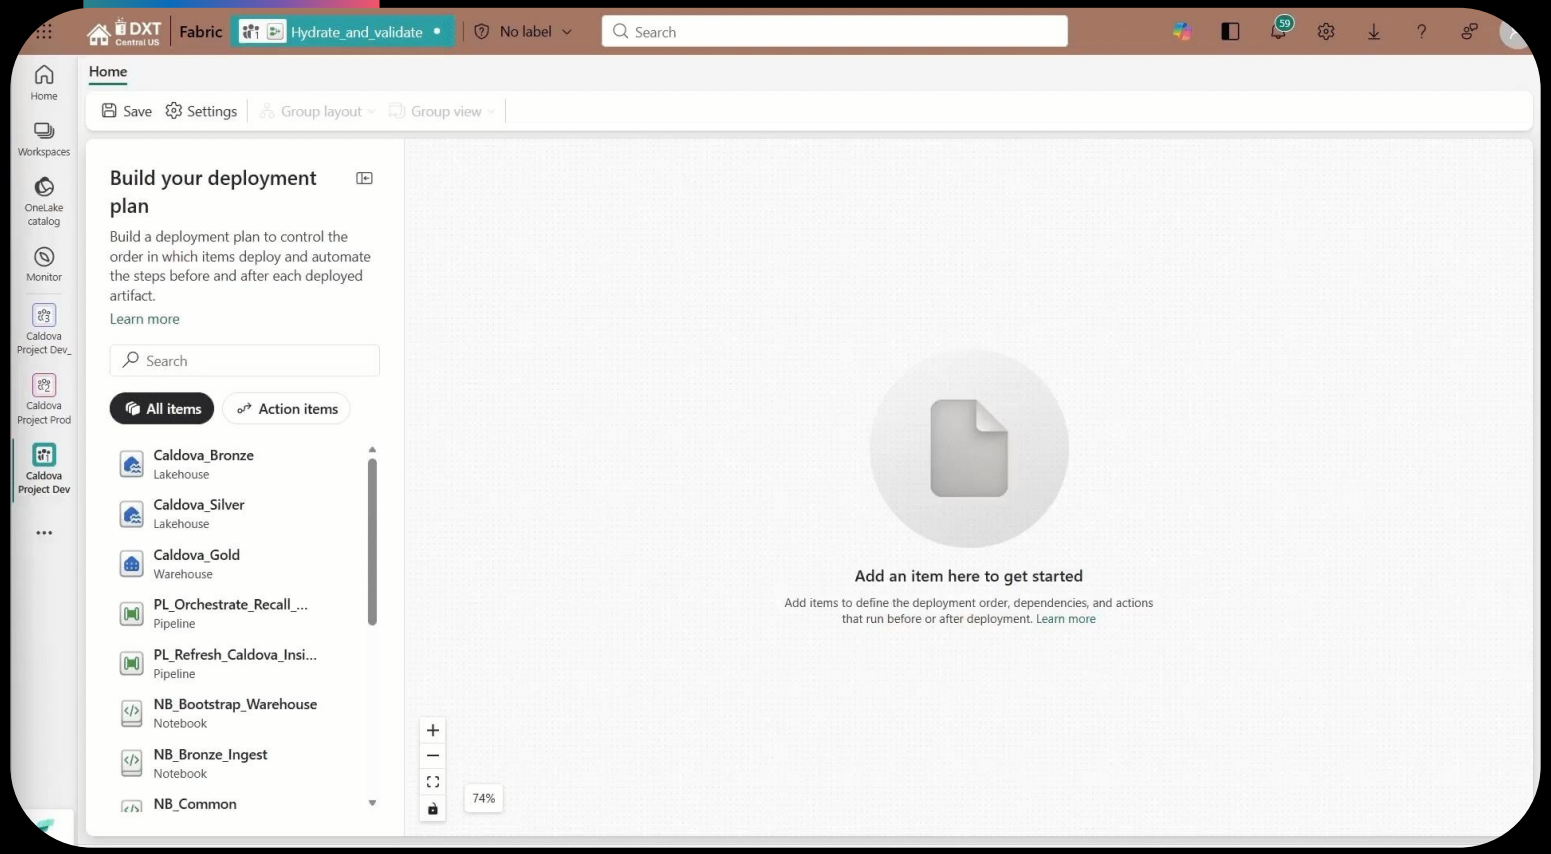

Retain context and history across multi-stage projects

aka.ms/FabCopilotPrPr

Deployment Plans

Repeatable, governed deployments across your data estate

Public preview

Ordered rollouts

Run deployments in sequence, one governed step at a time

Built-in automation

Add ingestion and validation as pre- or post-deployment actions

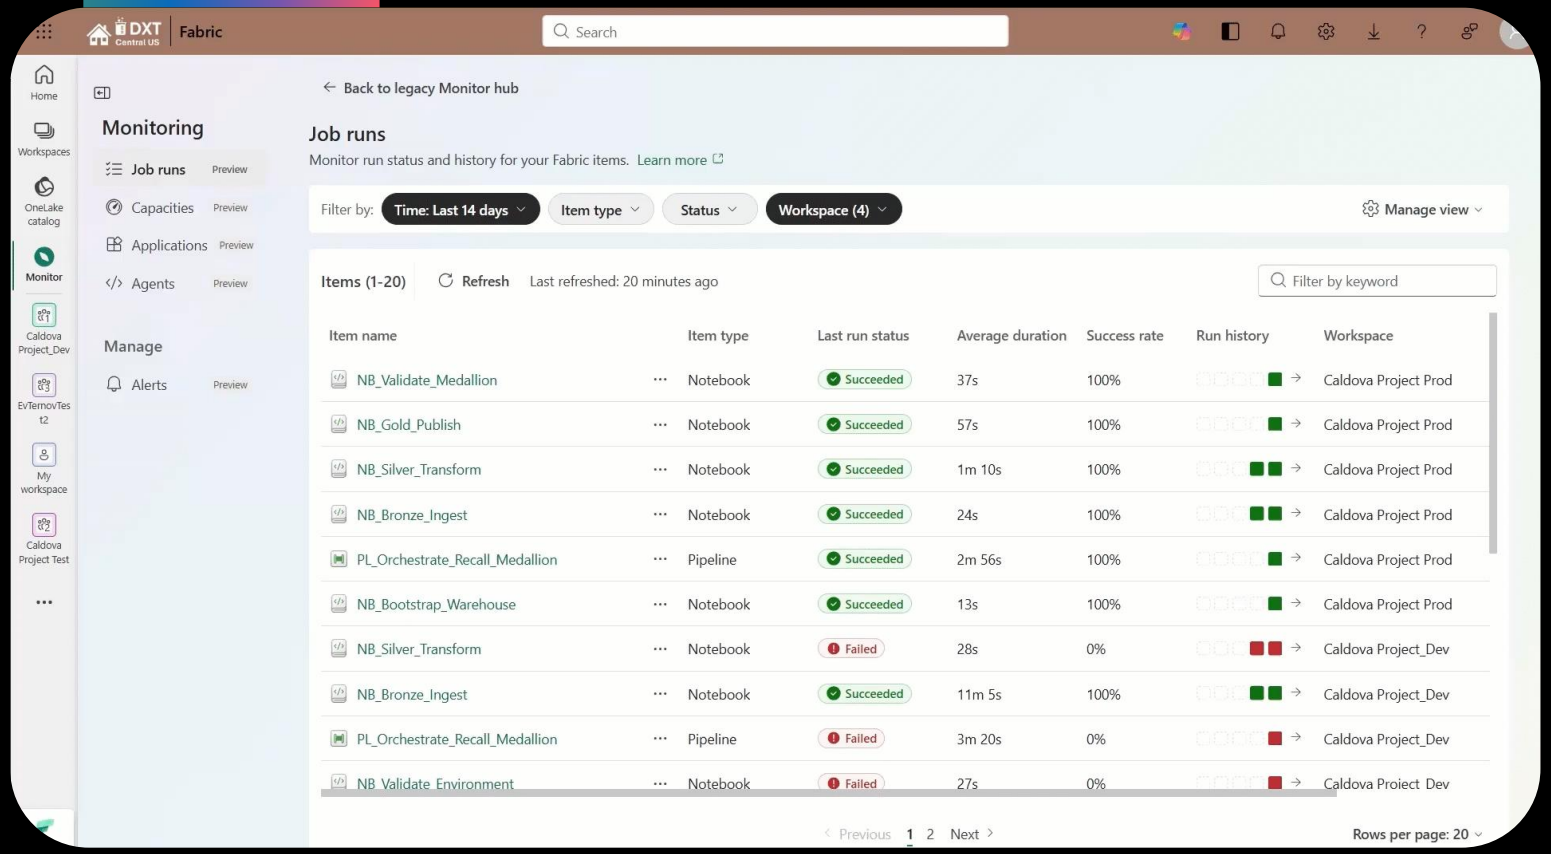

YAML-backed UX canvas

Drag and drop to define plans, with YAML as the source of truth

Observability in Fabric

One revamped view for proactive monitoring, debugging, and alerting

Public preview

Unified monitoring

Track jobs, workloads, and capacities in one refreshed hub

Agentic debugging

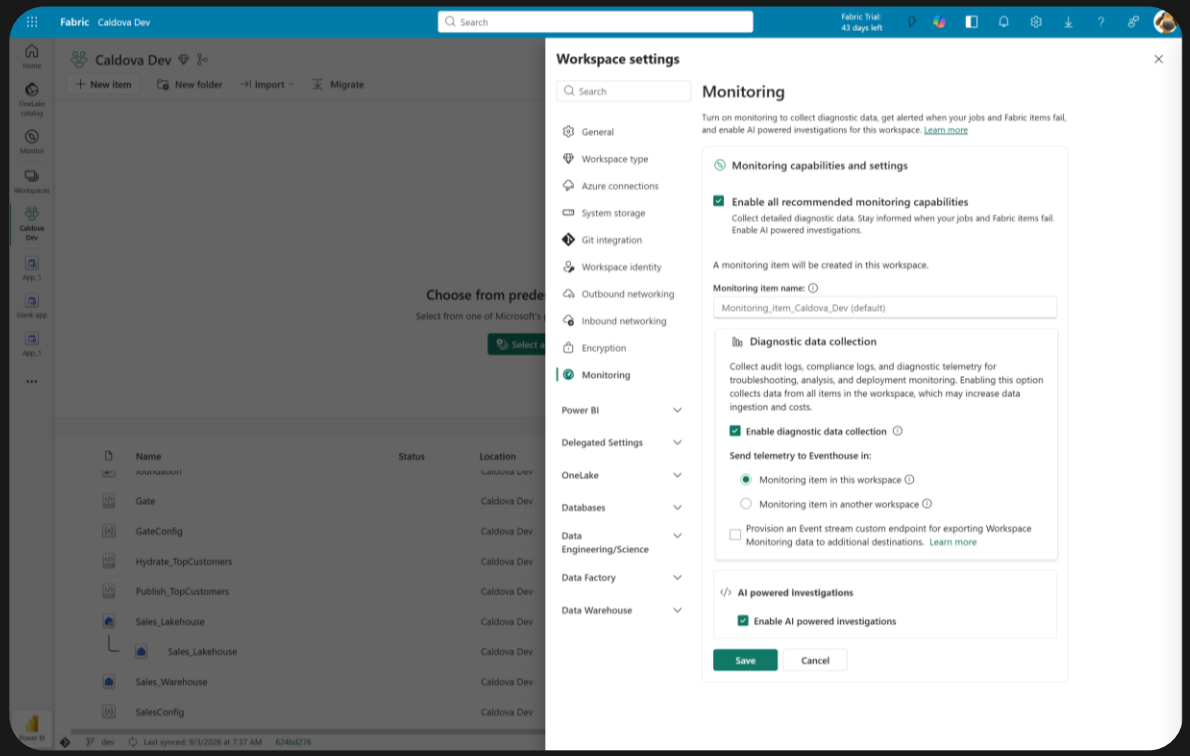

Find root causes with operations agents and act on fixes instantly

Proactive alerting

Watch capacity headroom and spot failures early with Activator

Workspace monitoring: unify workspace telemetry

Public preview

Monitor across workspaces by consolidating telemetry in a shared Eventhouse for unified observability.

Investigate and resolve issues faster with operations agents that identify root causes and Activator alerts that automate response.

Fully control your data by modifying the retention policy on your Eventhouse, or extend monitoring to external tools with public APIs and Event Stream custom endpoint

More News: Developer Experiences

Source Control with Git

- Compare and commit GA
- Selective branching GA
- Bulk import/export API GA

APIs & Tooling

- Fabric Remote MCP GA
- Fabric Local MCP: Data Factory and extended OneLake tools GA
- Fabric CLI: Azure sign-in, cross-WS search, and bulk deploy GA
- Fabric Terraform Provider: new security and audit resources GA
- Expanded REST API quotas: 500 calls/minute GA

OneLake Catalog

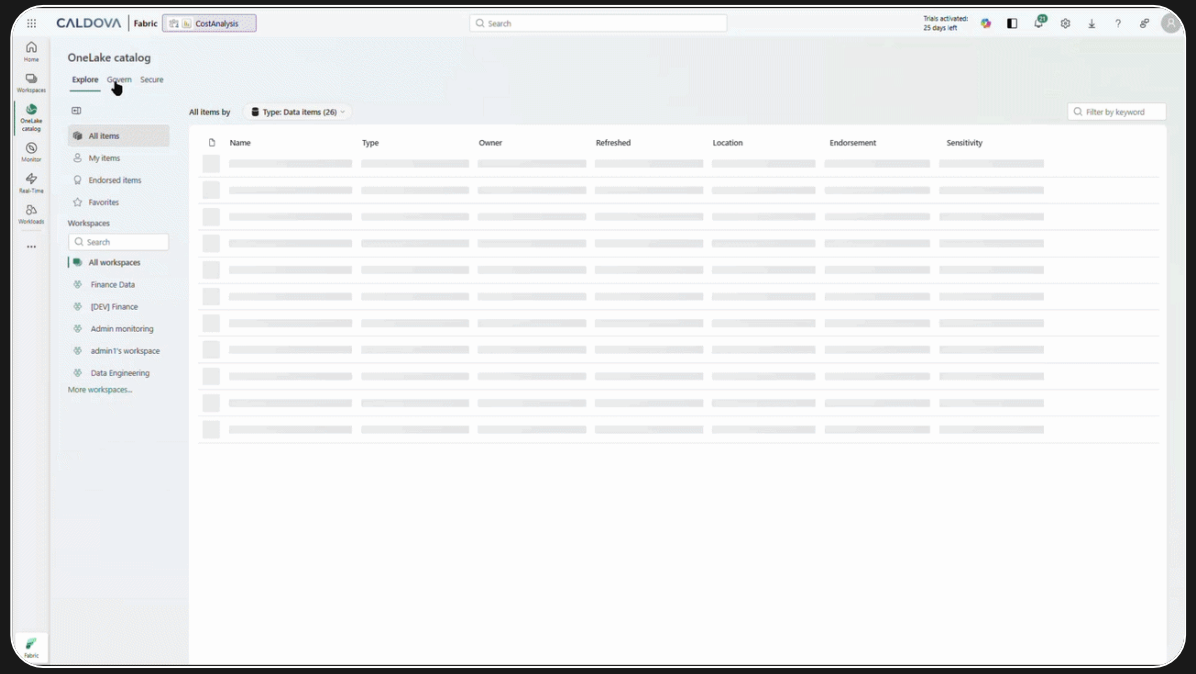

The trusted data catalog for organizations worldwide

OneLake catalog:

Govern with centralized management capabilities

Generally available

Govern your data security, health, and curation across your estate richer insights including contextual signals, recommendations, and visibility into governance status.

New

Manage governance centrally with domains, tags, policies, capacities and more in a single unified experience.

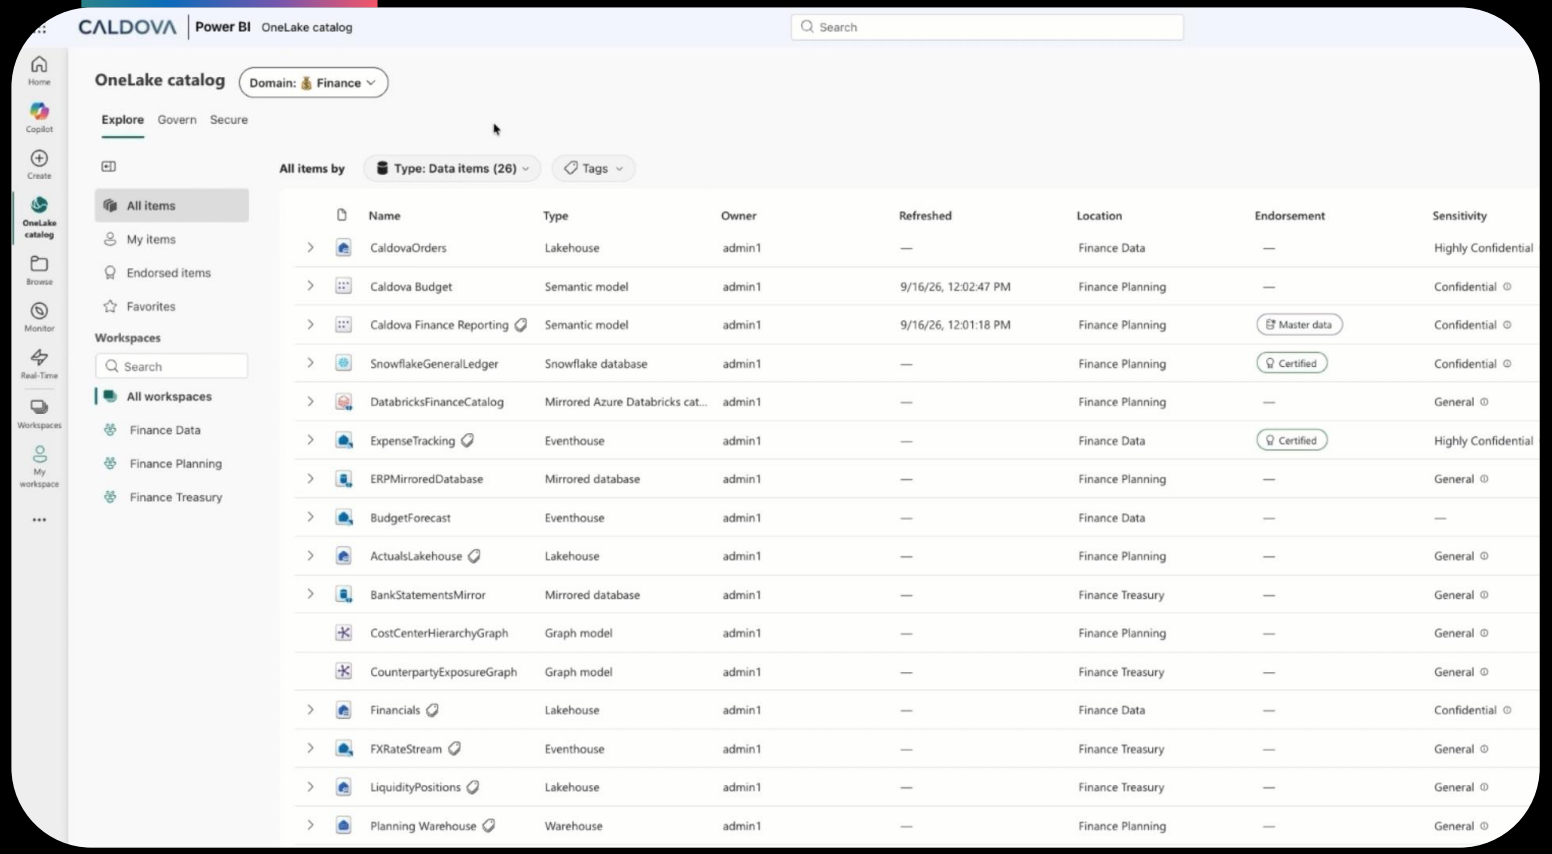

New

Govern Skills help Fabric admins identify risks and take recommended actions to keep their data estate clean, active, and well organized.

OneLake Catalog: New Capabilities

Deeper data discovery and smarter, AI-guided governance

Public preview

Discover in depth

Browse schemas, tables, and subitems with live data previews

Search smarter

Find data faster with agent-ready search and richer filters

Govern with agent skills

Use Fabric agent skills to audit and organize your data estate

Introducing policies in Fabric:

Enforce flexible governance controls

Public Preview

Tenant and Capacity admins can define precise, attribute-based policies to enforce organizational requirements on users and data

---

Govern user and system actions such as external data sharing, item creation, and editing workspace security settings, with more to come

---

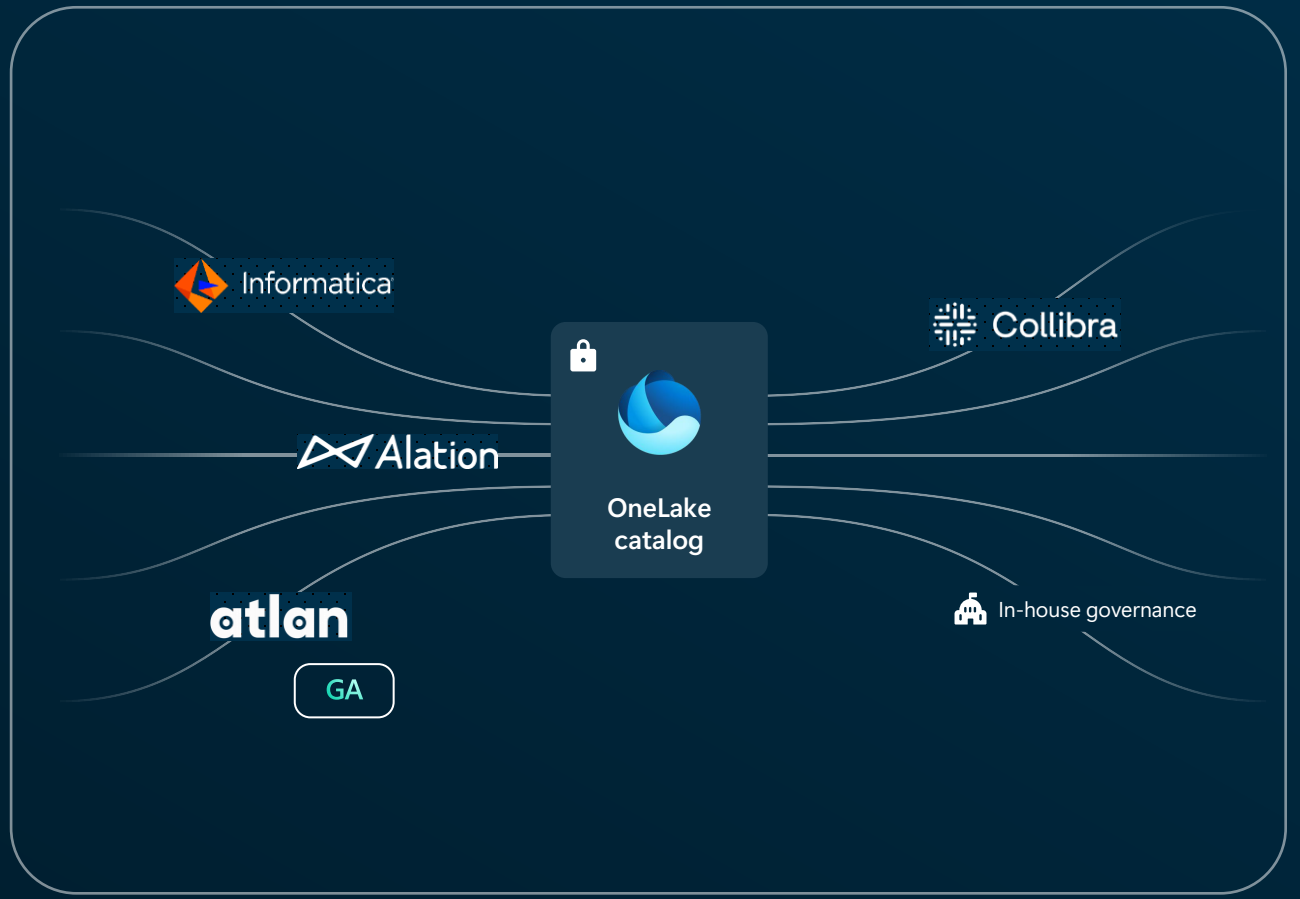

Manage policies centrally through a new policy management page, monitoring, APIs, and CI/CD support for lifecycle management

Integrate catalog metadata with 3rd party governance tools

Supports enterprise catalog tool integrations, including **Collibra, Atlan, Alation, Informatica, and more**

Scan metadata and lineage, including sensitivity labels, data sources, tags, etc., with the **Tenant admin Scanner APIs**

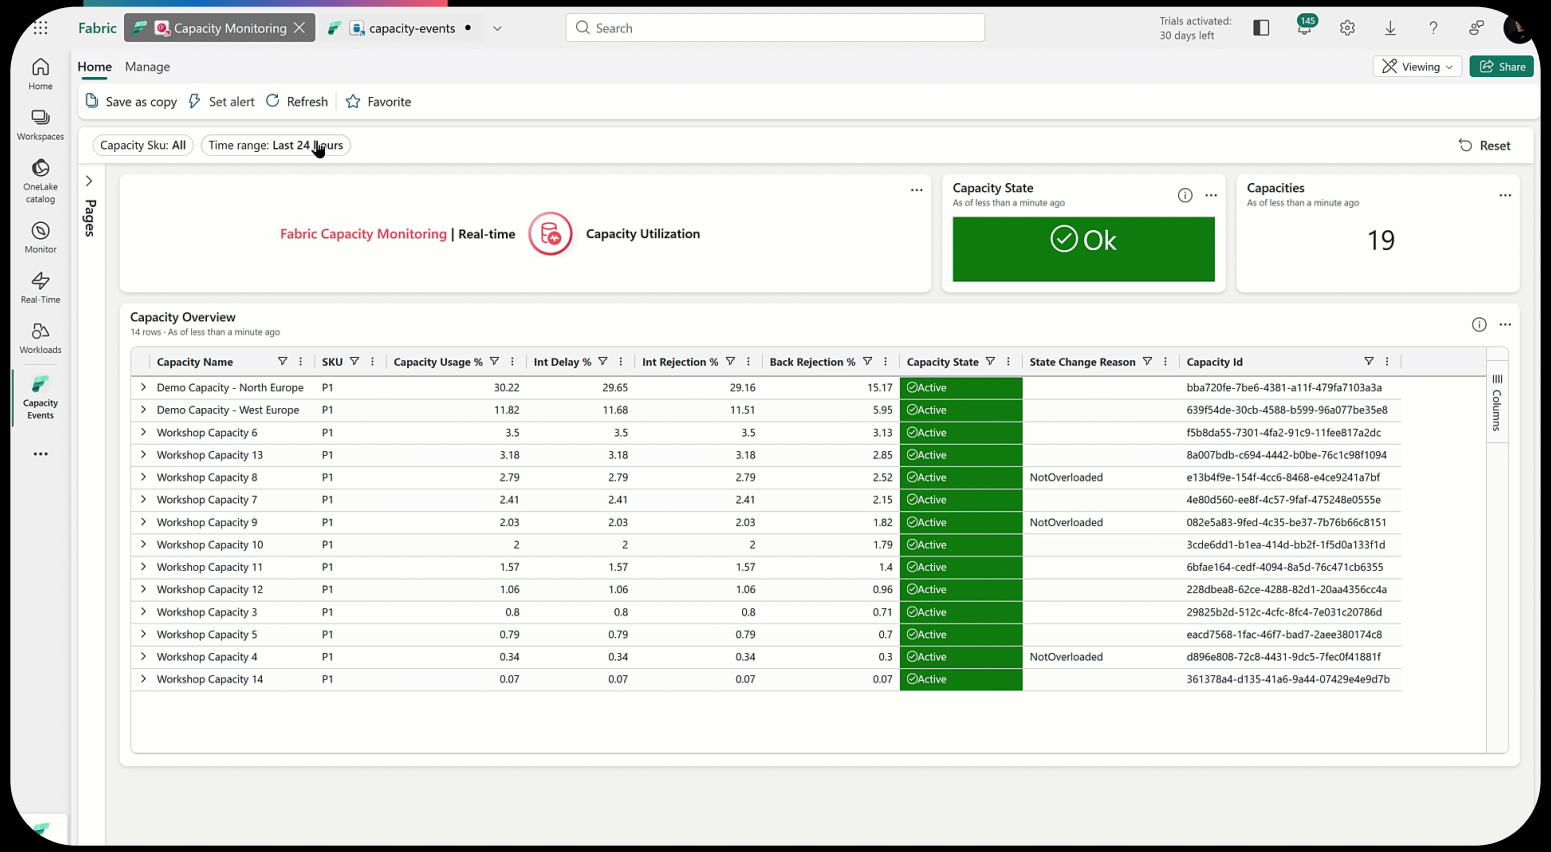

Robust enterprise capabilities like authentication with **service principal** and **incremental scans**

Unified Capacity Management

Monitor, protect, and optimize capacity across your estate

Generally available

Capacity Name	SKU	Capacity Usage %	Int Delay %	Int Rejection %	Back Rejection %	Capacity State	State Change Reason	Capacity Id

Real-time capacity events

Stream capacity signals live and trigger alerts with Activator

Surge protection

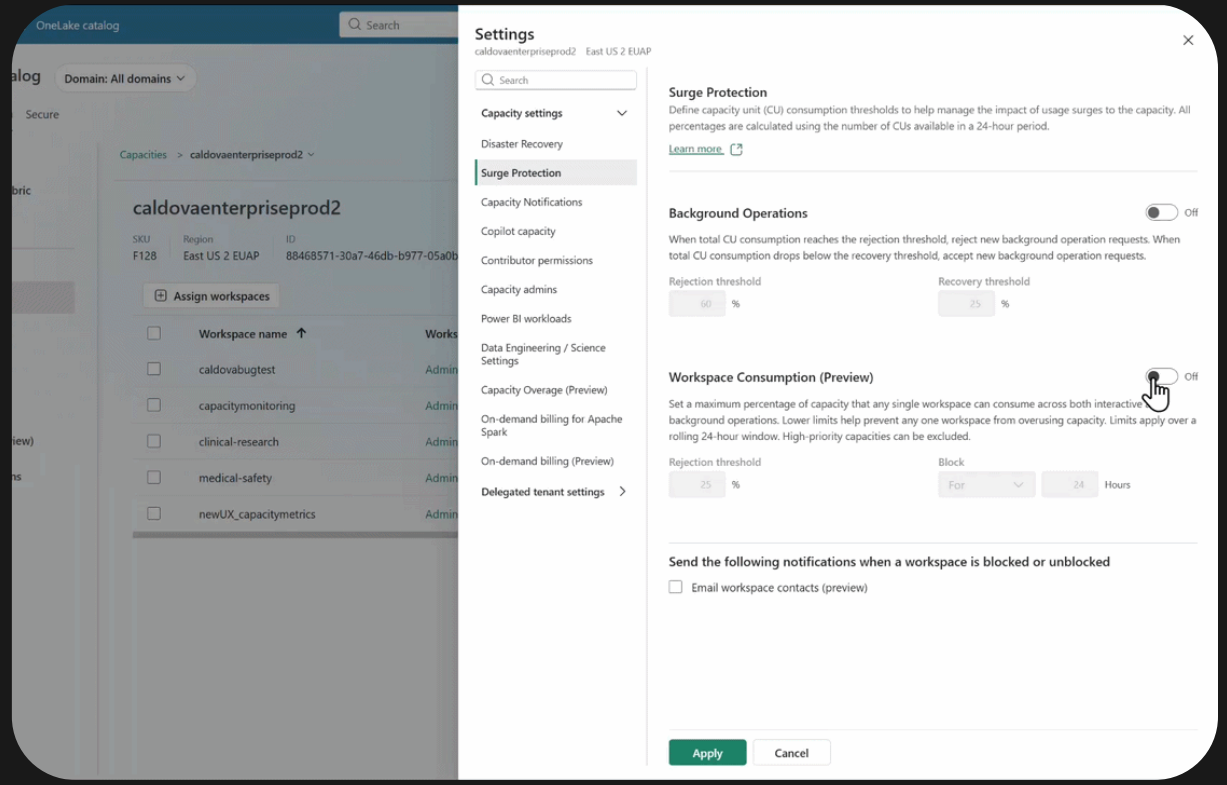

Cap per-workspace usage while protecting mission-critical jobs

Overage billing

Automatically cover spikes to keep key workloads running

Workspace-level surge protection

Now Generally available

Apply capacity limit for workspaces to prioritize & balance capacity demand

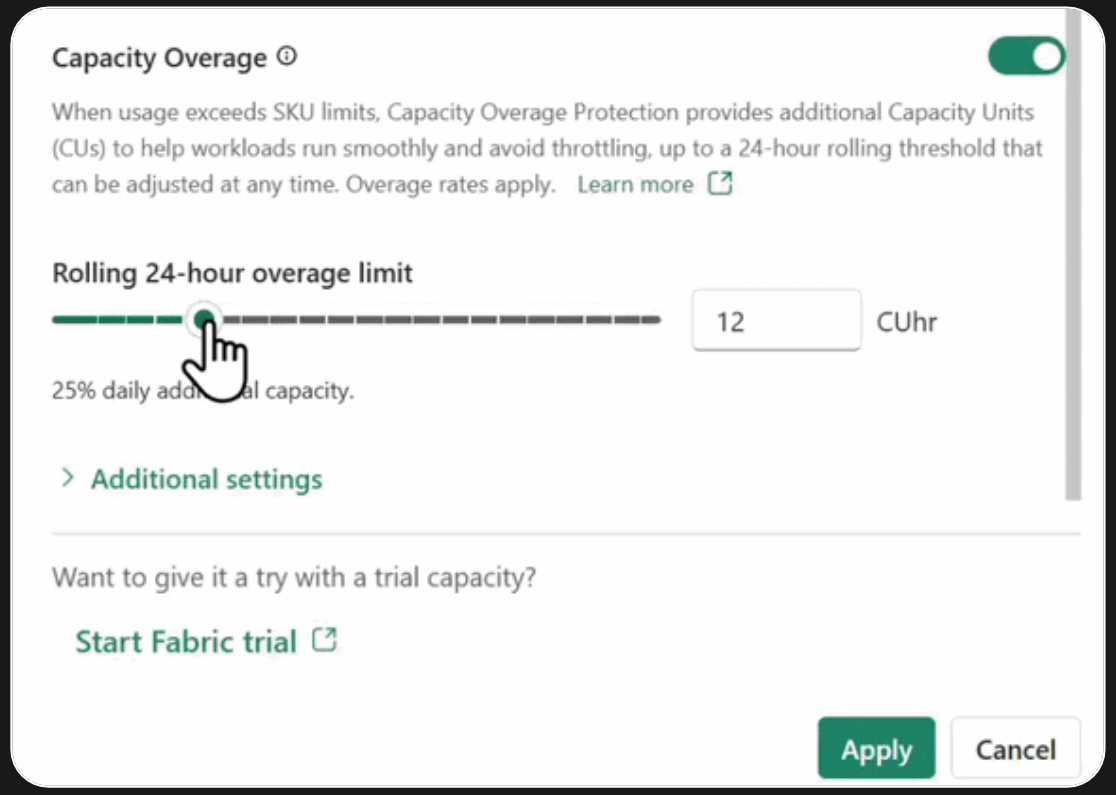

Block noisy neighbors from using all available capacity

Use Mission Critical mode to keep essential workloads exempt from the limit

Manage directly in OneLake catalog or in-the-moment within Monitor Hub

Capacity overage billing

Now Generally available

Automatically prevent throttling by paying for extra usage when capacity limits are exceeded

Set spending limits during capacity creation or in OneLake Catalog

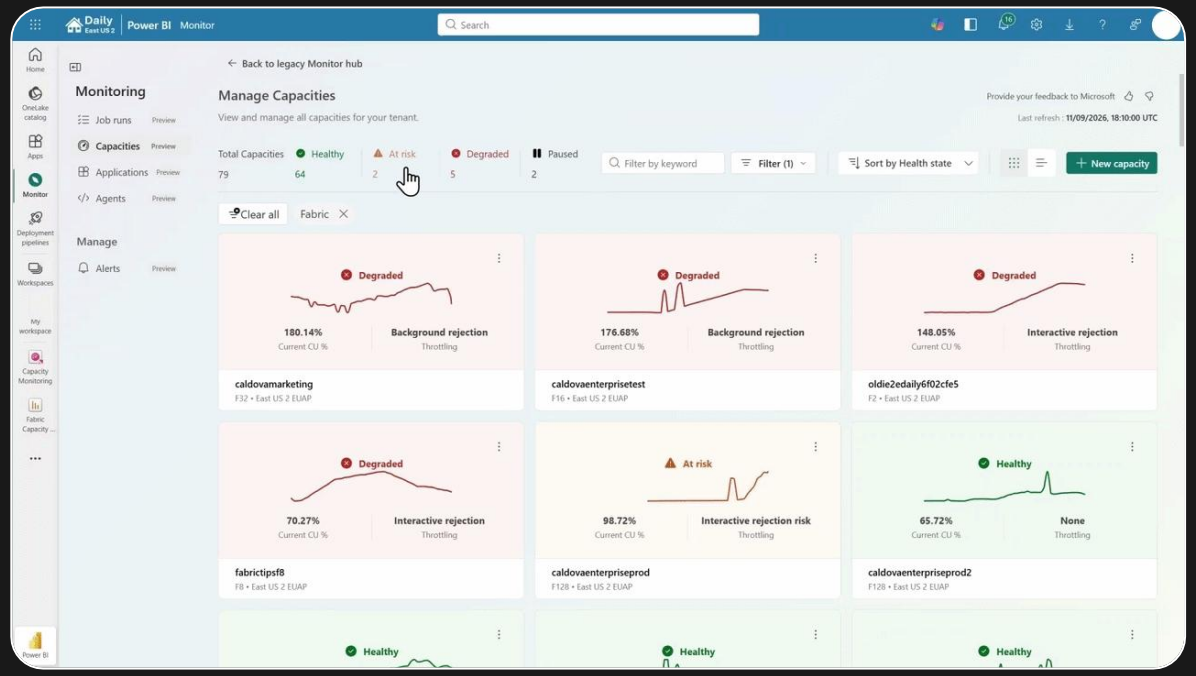

Get notified automatically when capacity overage limits are invoked

New

Larger Fabric SKUs generally available: F4096, F8192

Capacity insights & actions in monitor hub

Public preview

Rich in-product observability for capacity admins with at-a-glance health view to focus on where action is needed

Take in-line actions right where issues are observed: adjust overage & surge settings, migrate workspaces, resize*

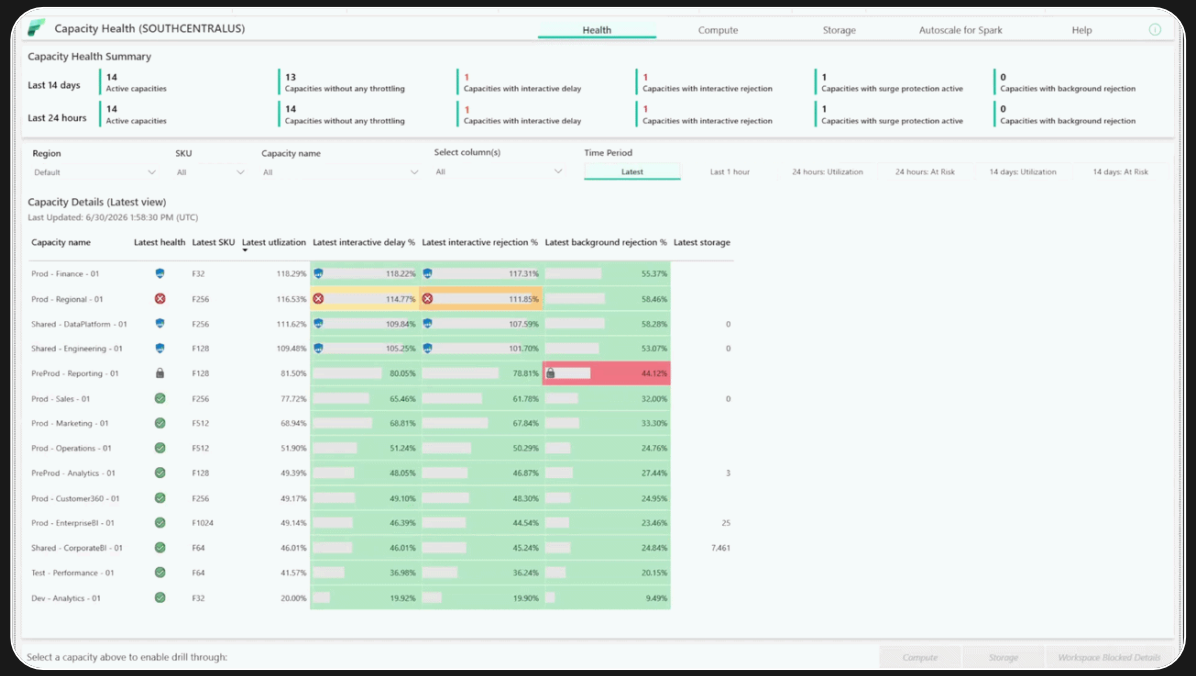

Top-to-bottom observability across altitudes and personas including applications, jobs, agents all in one UX

* Requires capacity admin to have Azure subscription permissions

Capacity metrics app

New Look & Capabilities

Generally available

New Views: Including heatmap to identify daily & hourly trends; new CU table showing high item contributors

---

New UX/UI: Enhanced UX brings key metrics and insights to surface, allows for easy drill down; cleaner, modern UI

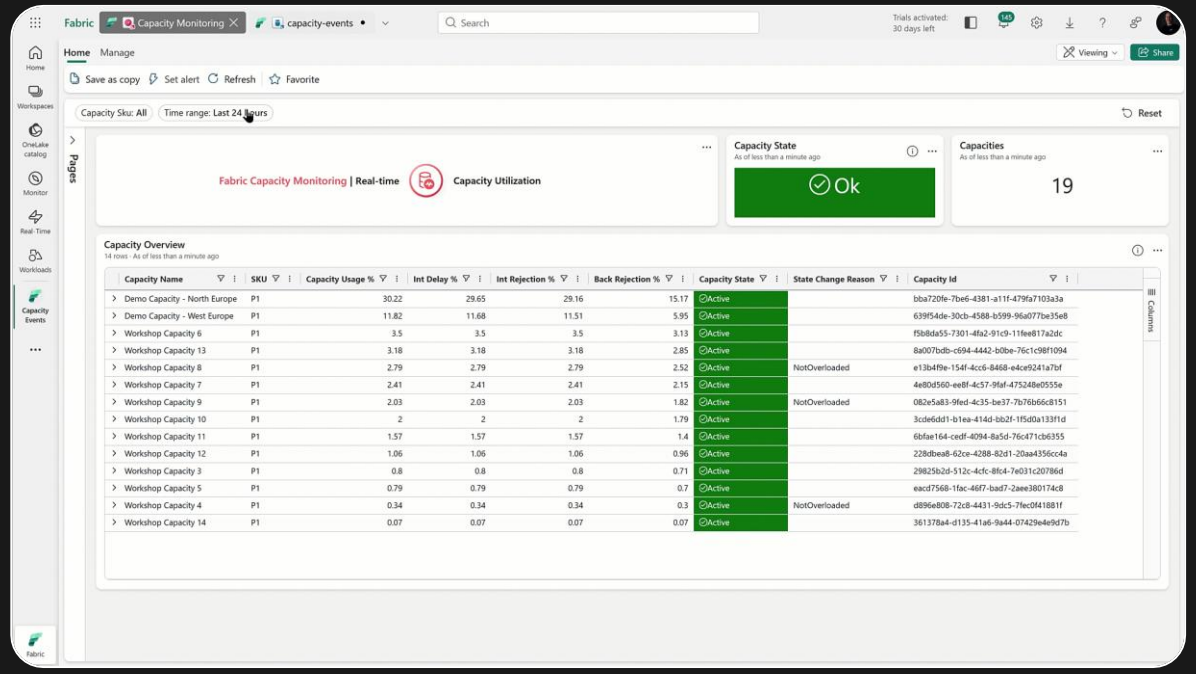

Simplified Metrics: Time spent in health state, CU / sec reporting for analysis, other changes per real-world feedback

Capacity events in Real-Time Hub

Overview & Operation

Overview Events now generally available

Operation Events now in Preview

Harness real-time telemetry to monitor capacity health at two event altitudes:

- Overview: Capacity Summary, State — GA
- Operation: Workspace, Items, etc. — Preview

Trigger alerts and actions using RTI, Eventhouse, and Activator

Retain & analyze historical data to assist with forecasting, capacity plans

Integrate signals with custom systems of your choice or Accelerator (shown on left) for even faster time-to-value

Checklist for capacity admins

Managing your capacities

- Turn on **on-demand billing** for more variable workloads to automatically scale with demand
- **Capacity overage** to automatically cover excess usage and avoid throttling and configure **surge protection** to limit capacity and workspace consumption.
- **Centrally manage settings** for all capacities in the OneLake catalog alongside your broader governance.

Monitoring your capacities

- Use **monitor hub** capacity insights and actions to monitor health across capacities, jobs, and apps and take action directly.
- Use **capacity metrics app** to investigate capacity performance and identify root causes across utilization, throttling, storage, items, and operations
- Use **Real-Time Hub capacity events** to set up proactive alerting and respond to near-real-time capacity signals and retain events for analysis.

Microsoft Fabric capacity planning guide: aka.ms/Fabric-Capacity-Guidance

Public preview

On-Demand Billing

Introducing the F0 SKU for optional pay-per-use compute

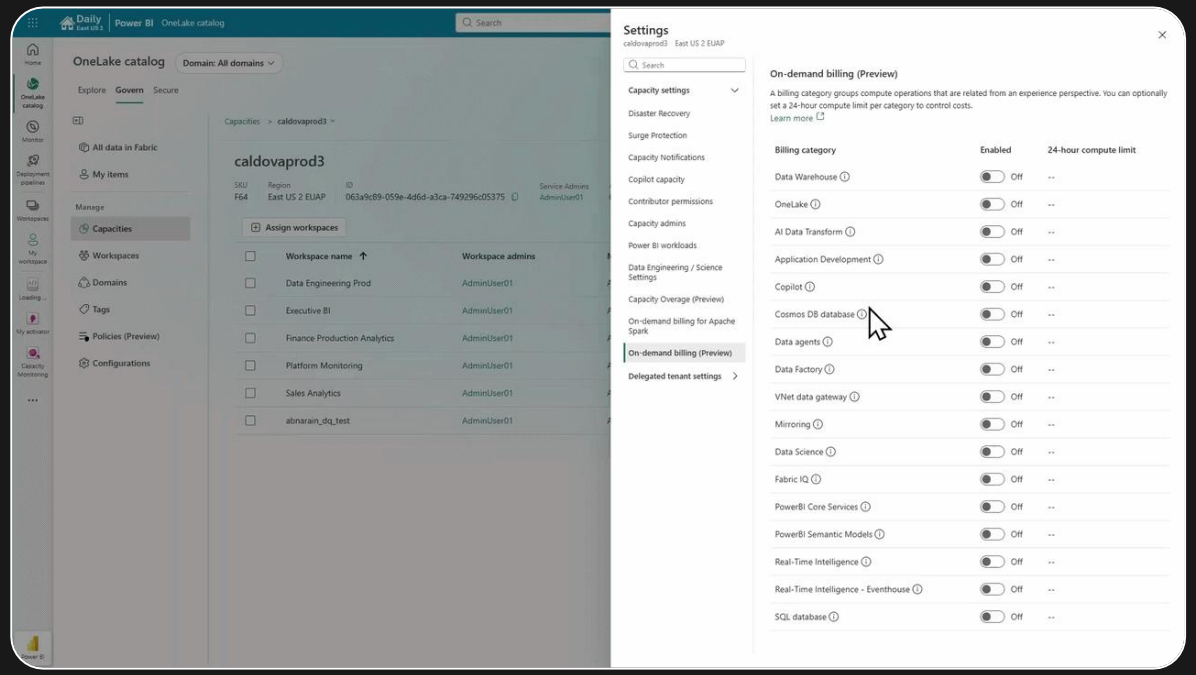

Run select workloads on demand, the rest on capacity

Start on F0 to run everything on demand, with nothing upfront

Set spend limits with built-in monitoring and governance

Fabric on-demand billing and zero provisioned

Public preview

Pay only for what you use with automatic compute scaling and no idle infrastructure costs.

Choose the approach that fits your needs:

1. **Use a Fabric zero provisioned (F0) SKU** to pay nothing upfront and run every workload with on-demand billing.
2. **Adopt a hybrid model by enabling on-demand billing** for select workloads while keeping others on provisioned capacity.

Stay in control with spend limits, usage monitoring, and built-in governance

Introducing, on-demand billing for OneLake

Pay for what you use, no capacity commitment required

Pay only for what you use

Consumption-based billing with automatic compute scaling means you're charged only for what you use with no idle infrastructure costs

Get started instantly

No upfront investment or capacity planning makes it easier to get started with OneLake

Multi-engine support

Combine consumption billing for OneLake compute with OneLake's bi-directional interoperability with Databricks and Snowflake for a unified data experience

Frontier Transformation with Fabric

Turning your data estate into one AI-ready foundation

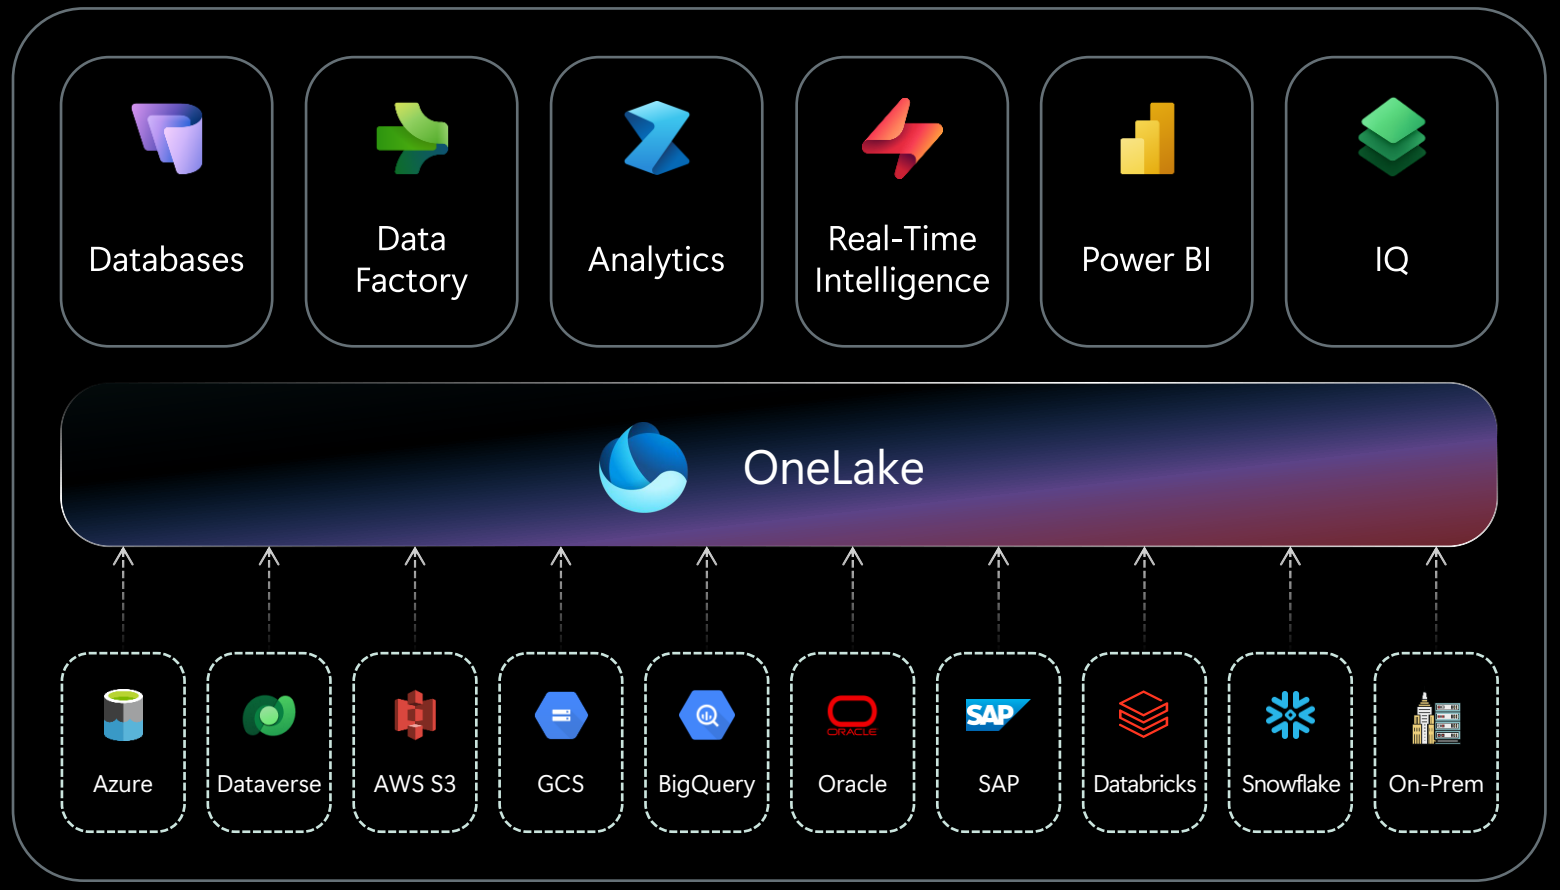

Frontier Transformation with Fabric

Turning your data estate into one AI-ready foundation

Unifying Data in OneLake

Across on-prem and any cloud. All apps, databases, files. Zero ETL.

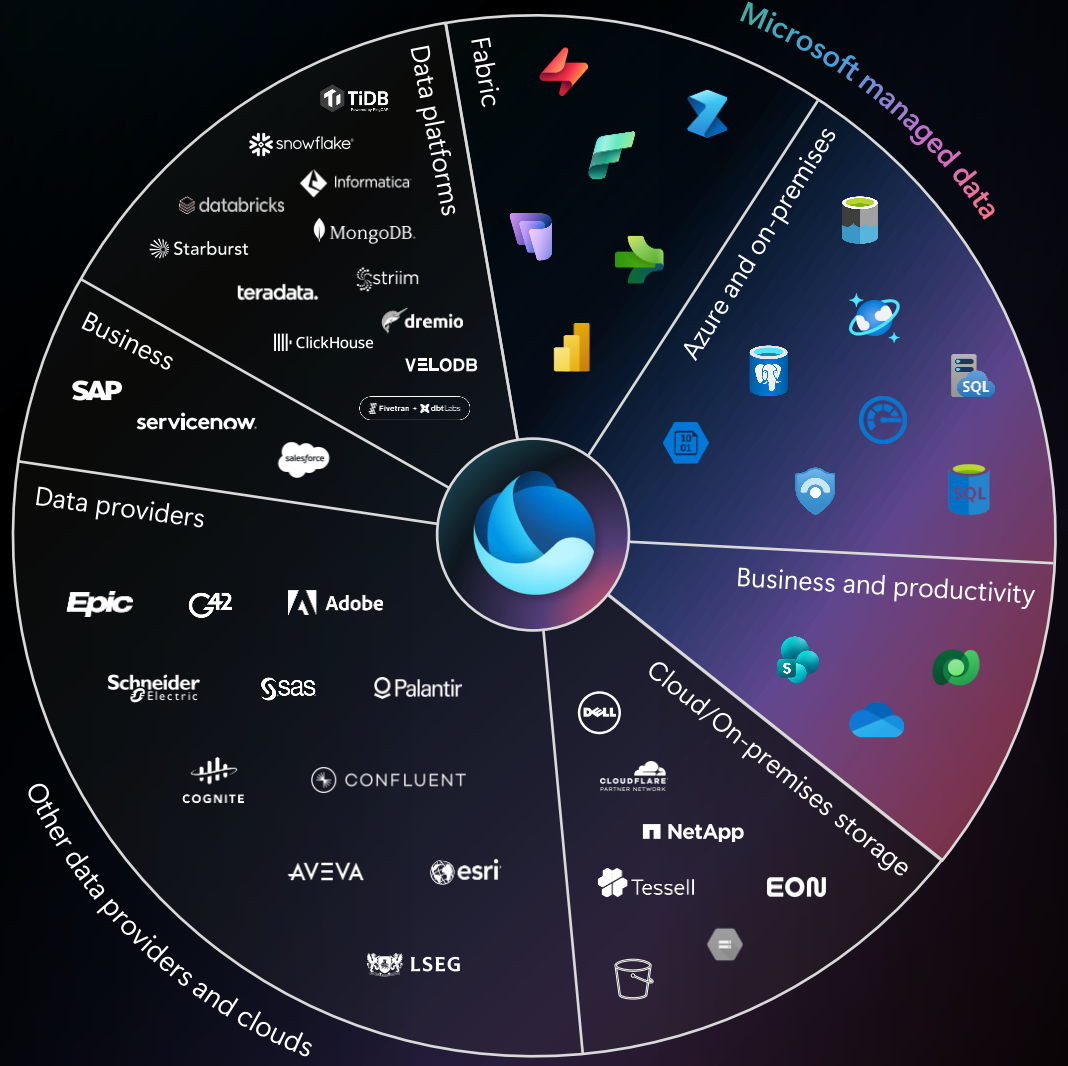

First multi-cloud SaaS data lake, open and interoperable by design

Shortcuts connect data in place across clouds and on-premises

Mirroring creates reflections of entire databases in OneLake

Both are free: no ingestion or duplication charges

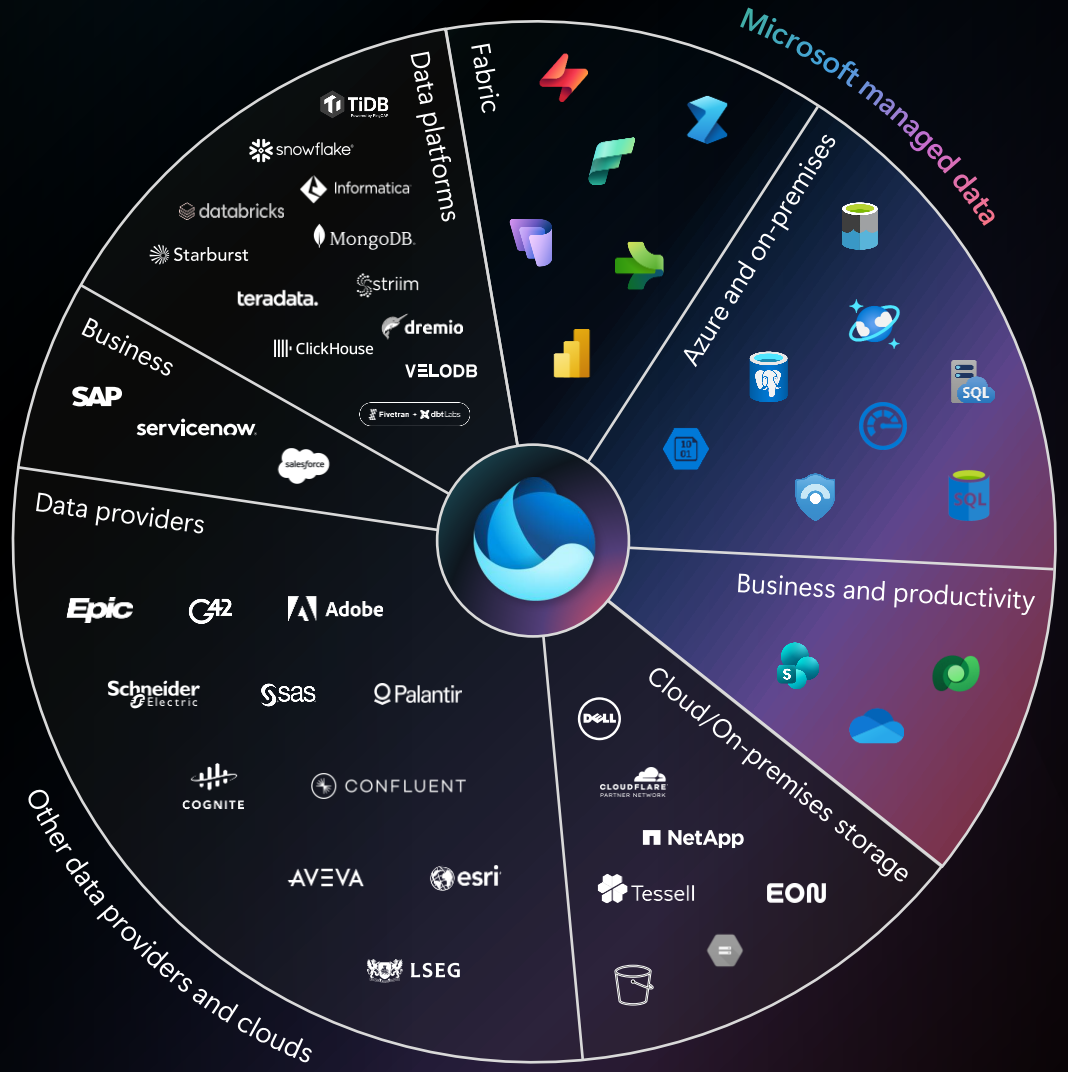

Announcing

Data mirroring

Announcing

Shortcut and Mirror Sources

Generally available

- Google BigQuery
- SharePoint + OneDrive

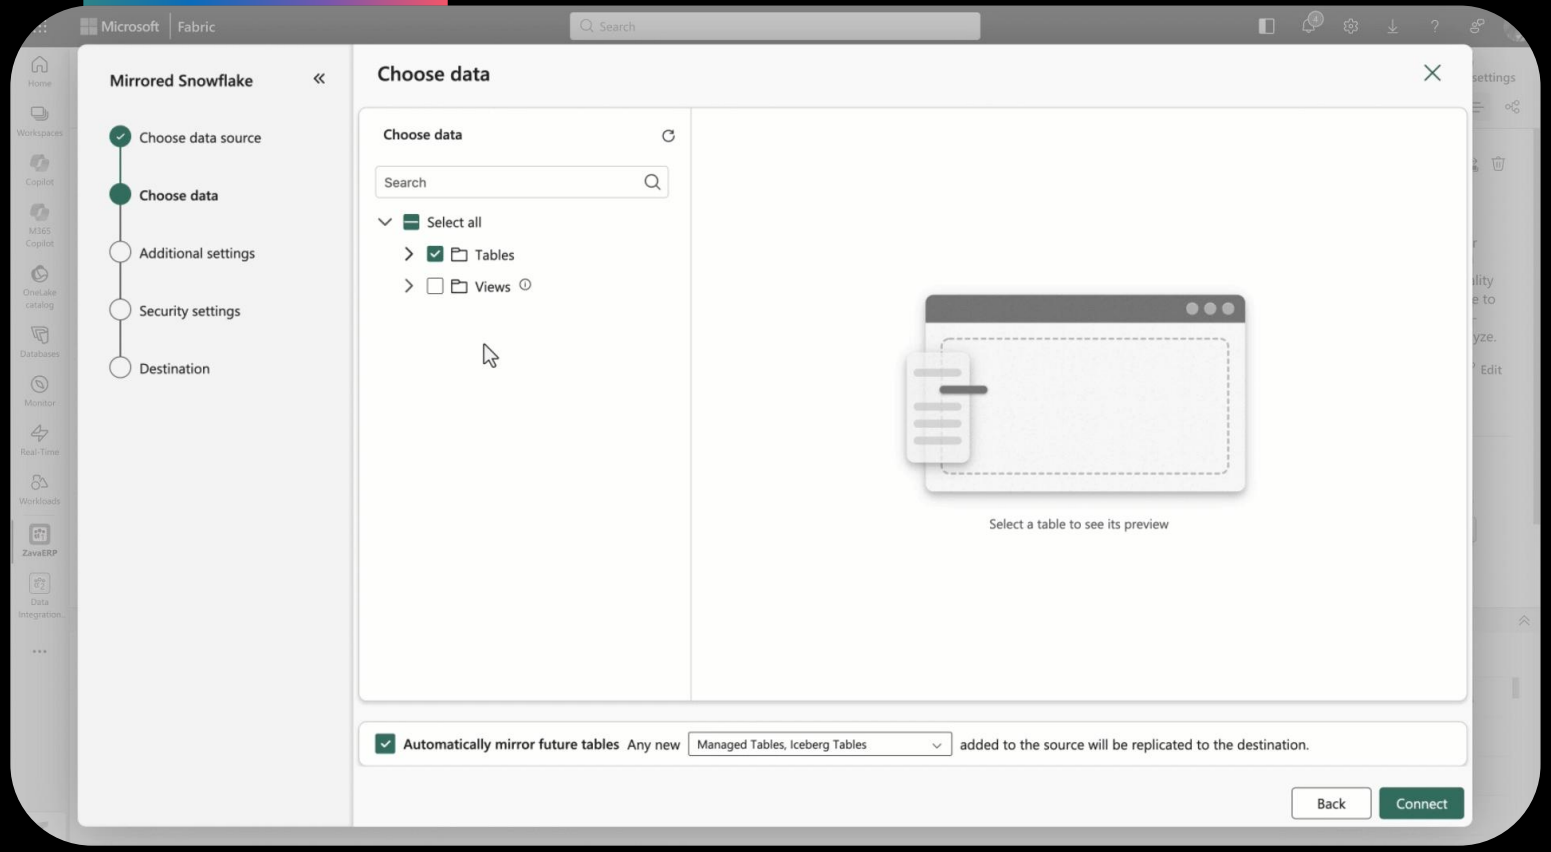

Public preview

- Azure Monitor
- AWS Glue
- AVEVA Connect
- Google Lakehouse Catalog

Extended Capabilities in Mirroring

Richer replication with OneLake mirroring, now generally available

Generally available

Change data feed

Process only changed rows: inserts, updates, deletes

Logical view replication

Replicate views with filters, joins, and transforms intact

New

Mirrored security roles

Preserve Snowflake security roles in mirrored OneLake data

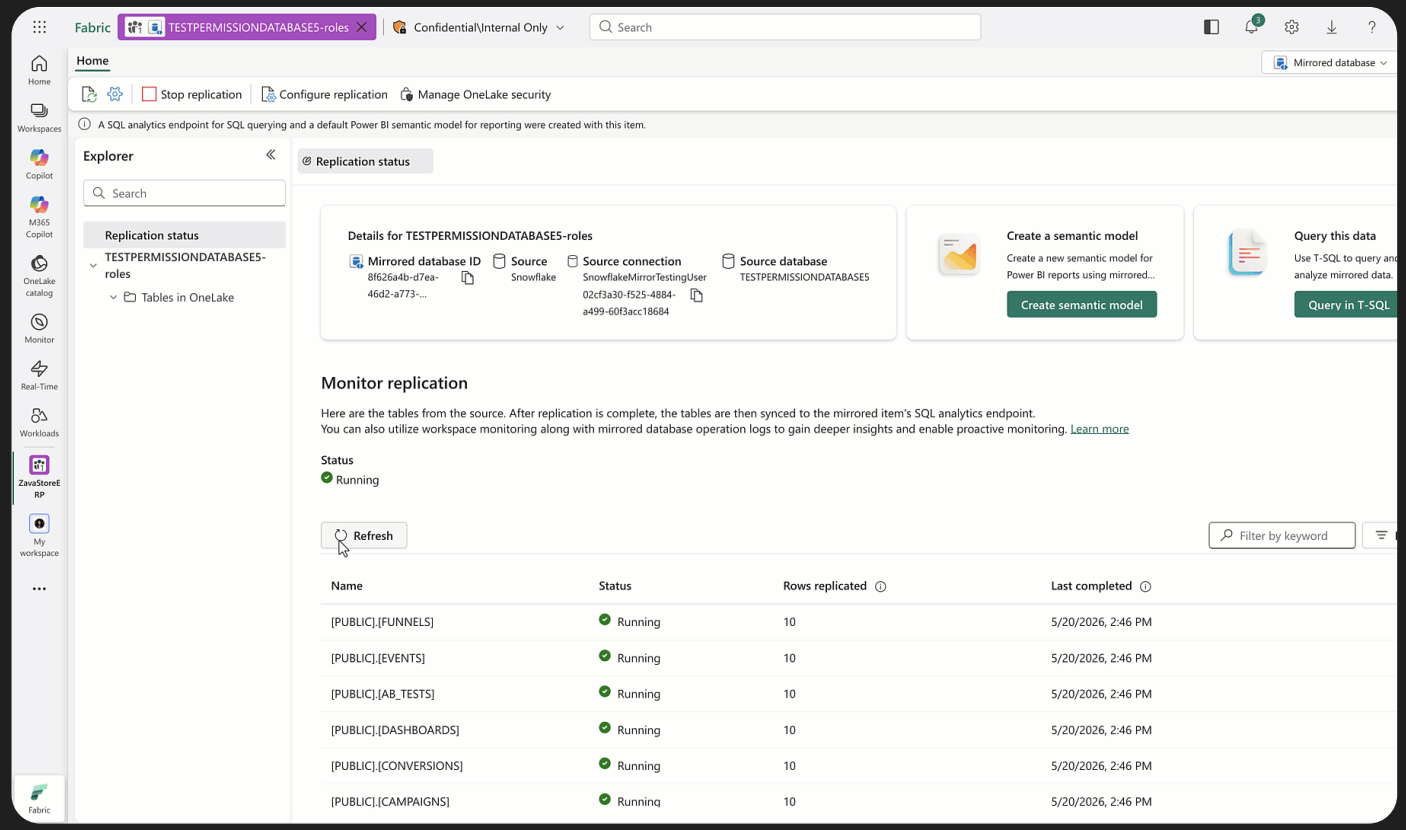

Mirroring Security Roles

Mirroring security roles & metadata

Carry source-defined access controls into OneLake alongside mirrored data

Public preview

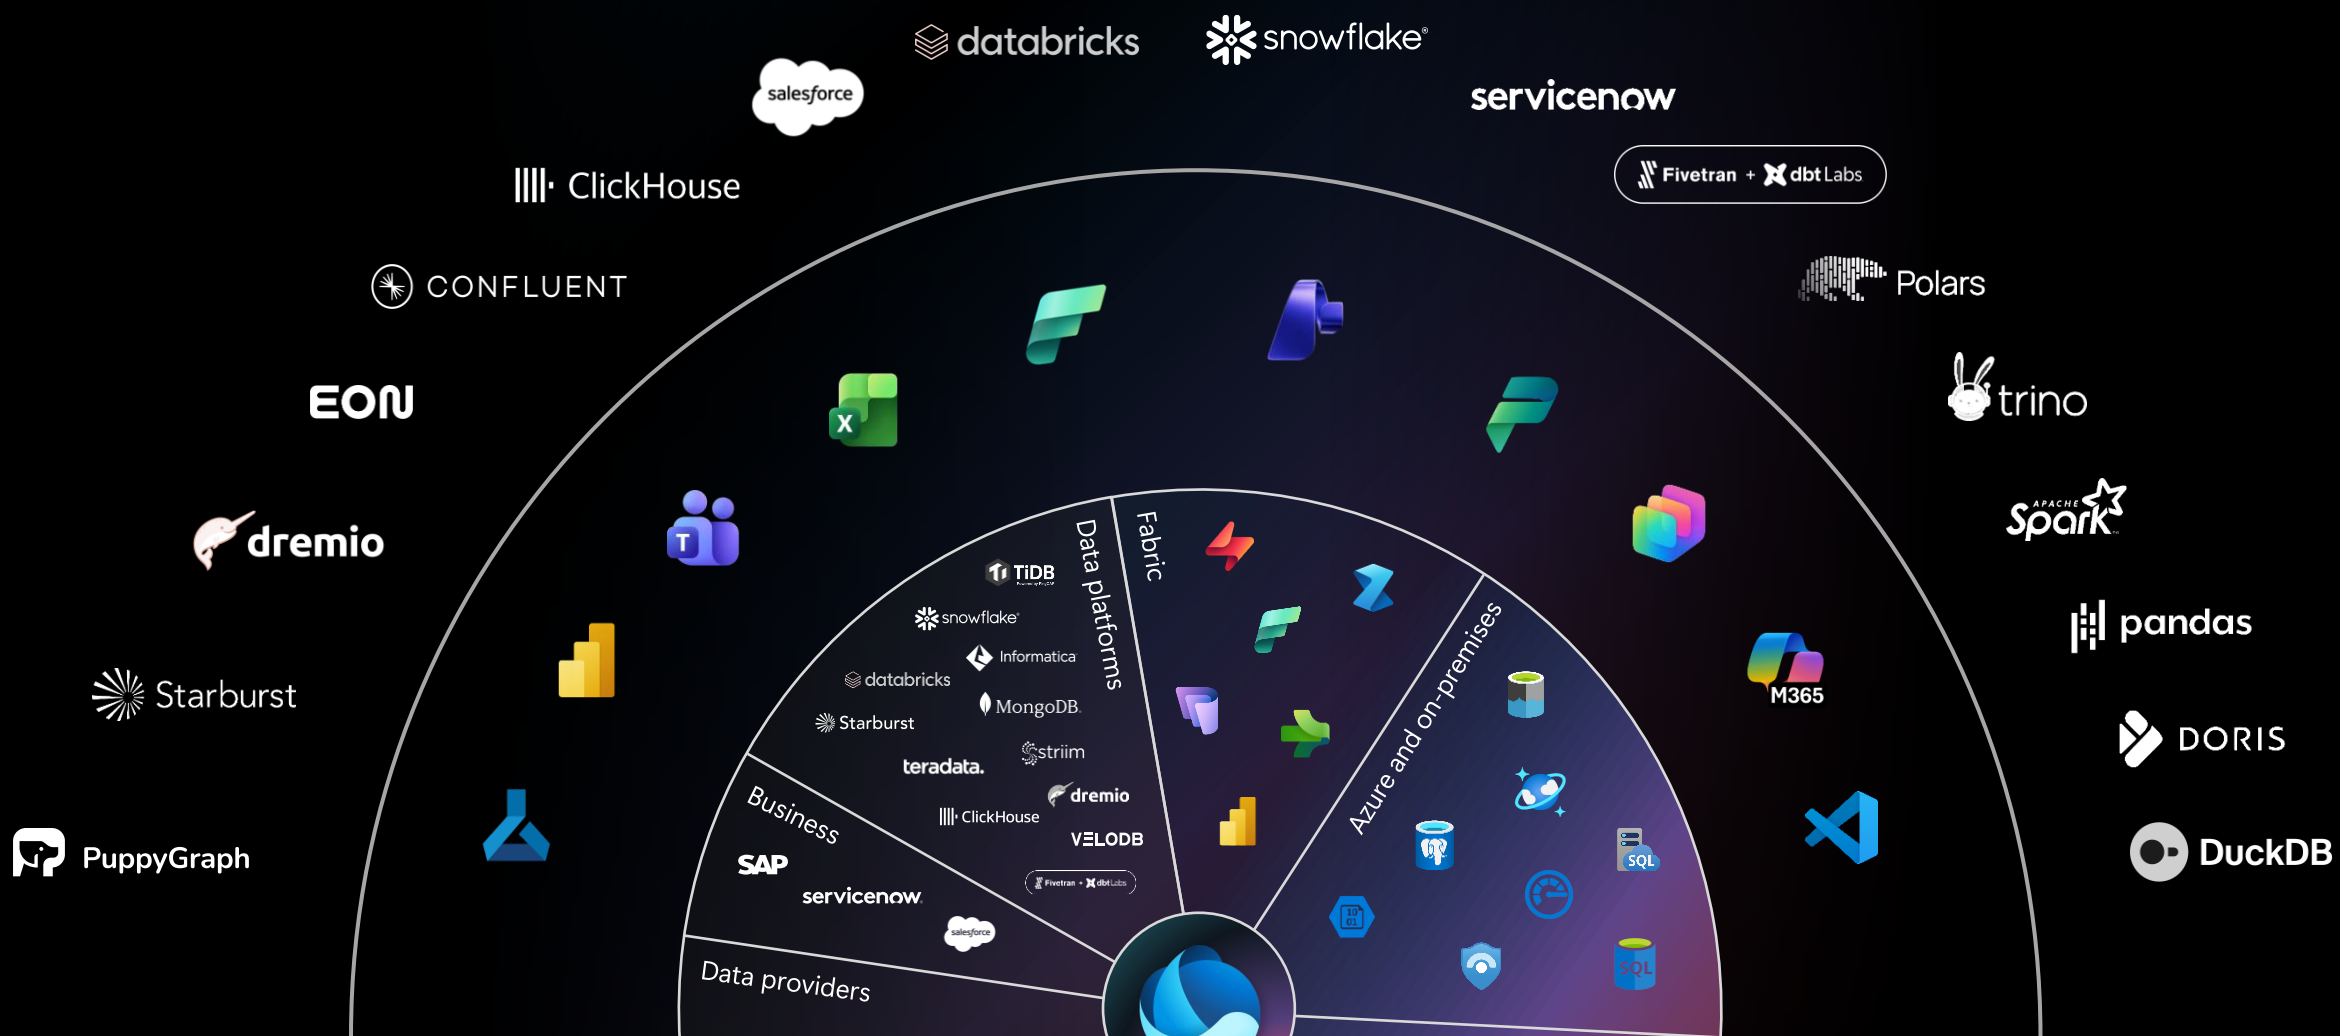

Mirror security roles and metadata alongside data from Snowflake today, expanding to more sources

Translate security roles and object/table mappings into **OneLake security constructs.**

Keep **Fabric access controls** in sync with source changes **reducing manual policy recreation.**

Preserve governance context — so **trusted data remains usable at scale.**

OneLake Data is Everywhere

Announcing

IQ Sharing in Fabric

Enterprise data and its context, governed and shared as one

Package tables and files as trusted data products

Keep data coupled with context wherever it’s accessed

Tap into data and context directly from ISV partners

Fabric Runtime 2.0

Our biggest Spark platform upgrade yet, now generally available

Generally available

Modern open-source core

Build on Spark 4.1, Delta 4.2, and Python 3.13 in a single upgrade

Enhanced native execution

Run queries up to 6x faster than OSS Spark, no tuning required

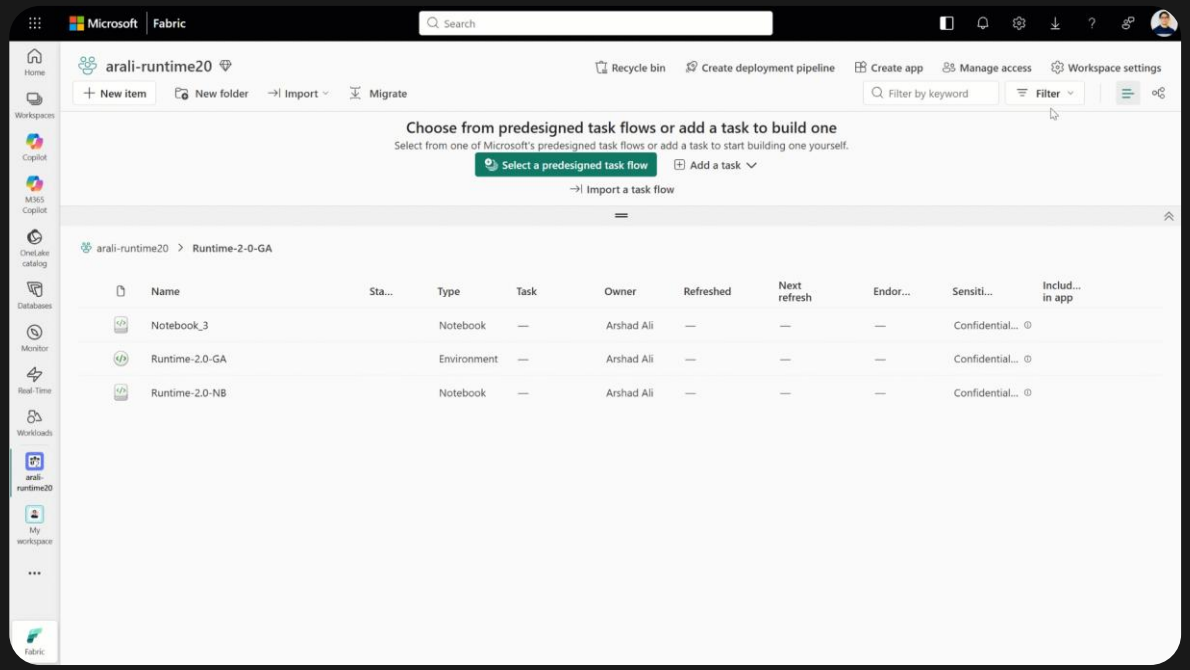

Drop-in compatibility

Maintain existing Spark APIs and pipelines with no rewrites

Runtime 2.0

Next generation Spark runtime with the latest open-source innovations

Generally available

Spark 4.1 brings enhancements like Real-time streaming mode, Major SQL evolution like procedural SQL, Recursive CTE, SQL UDFs, Pipe syntax and dozens of built-in functions etc.

Delta Lake 4.2 offers Identity columns, Variant datatype, Type widening, VACCUM LITE etc.

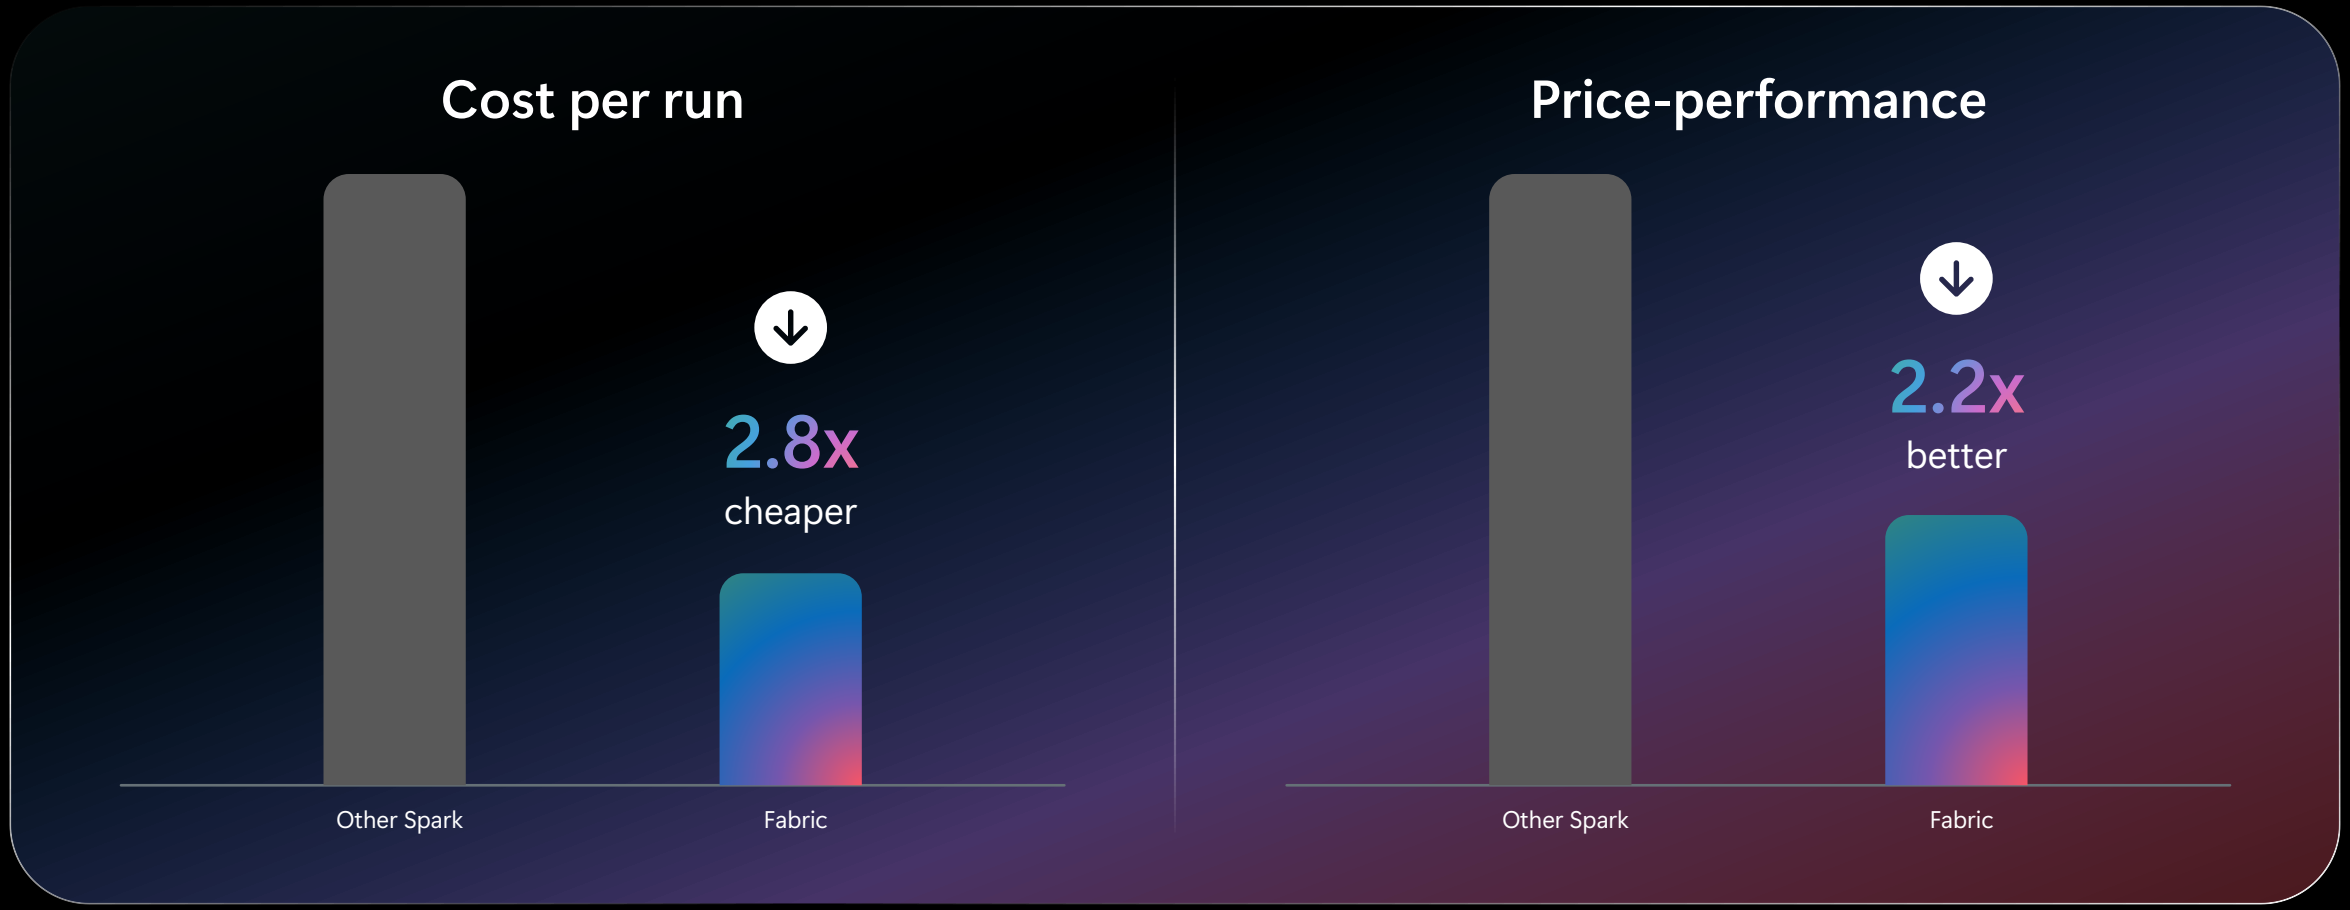

Significantly improved NEE offers 7x better performance of vanilla Apache Spark.

Coming Soon

Runtime 2.1 with Spark 4.2 and Delta Lake 4.4 is expected to be preview in early next year

Data and code assets

Lakehouse

Unified data lake with seamless integration across the Fabric ecosystem

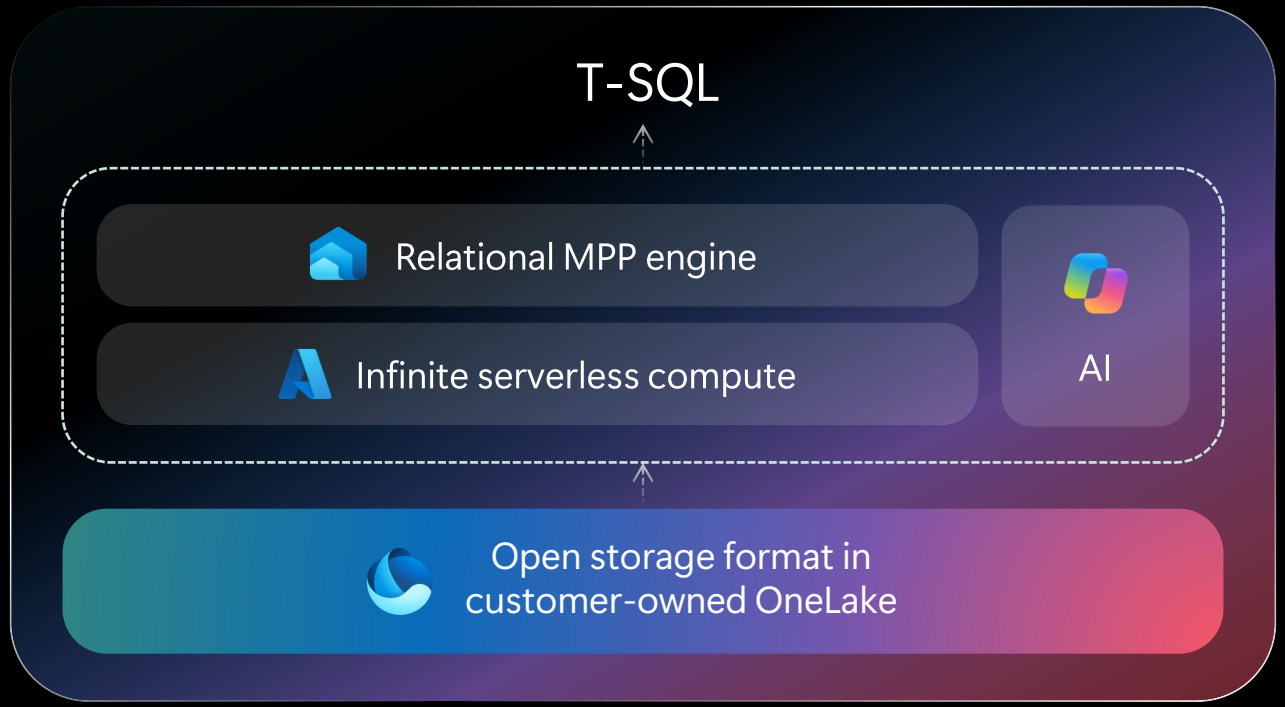

- Organize your tables, views and files and preview them in a single interface.
- Analyze data using Spark SQL queries, Notebook, SQL analytics endpoint, or Eventhouse.
- Full support of OneLake security permissions.

Coming Soon

- Table overview with key insights including disk size, rows, health, maintenance.
- Provide additional context through table and column descriptions.
- Semantic views over lakehouse data for analytics and agentic workflows.

Fabric Data Warehouse

Trusted T-SQL analytics on an open-format foundation, rebuilt for the AI era

Open Delta and Parquet in customer-owned OneLake

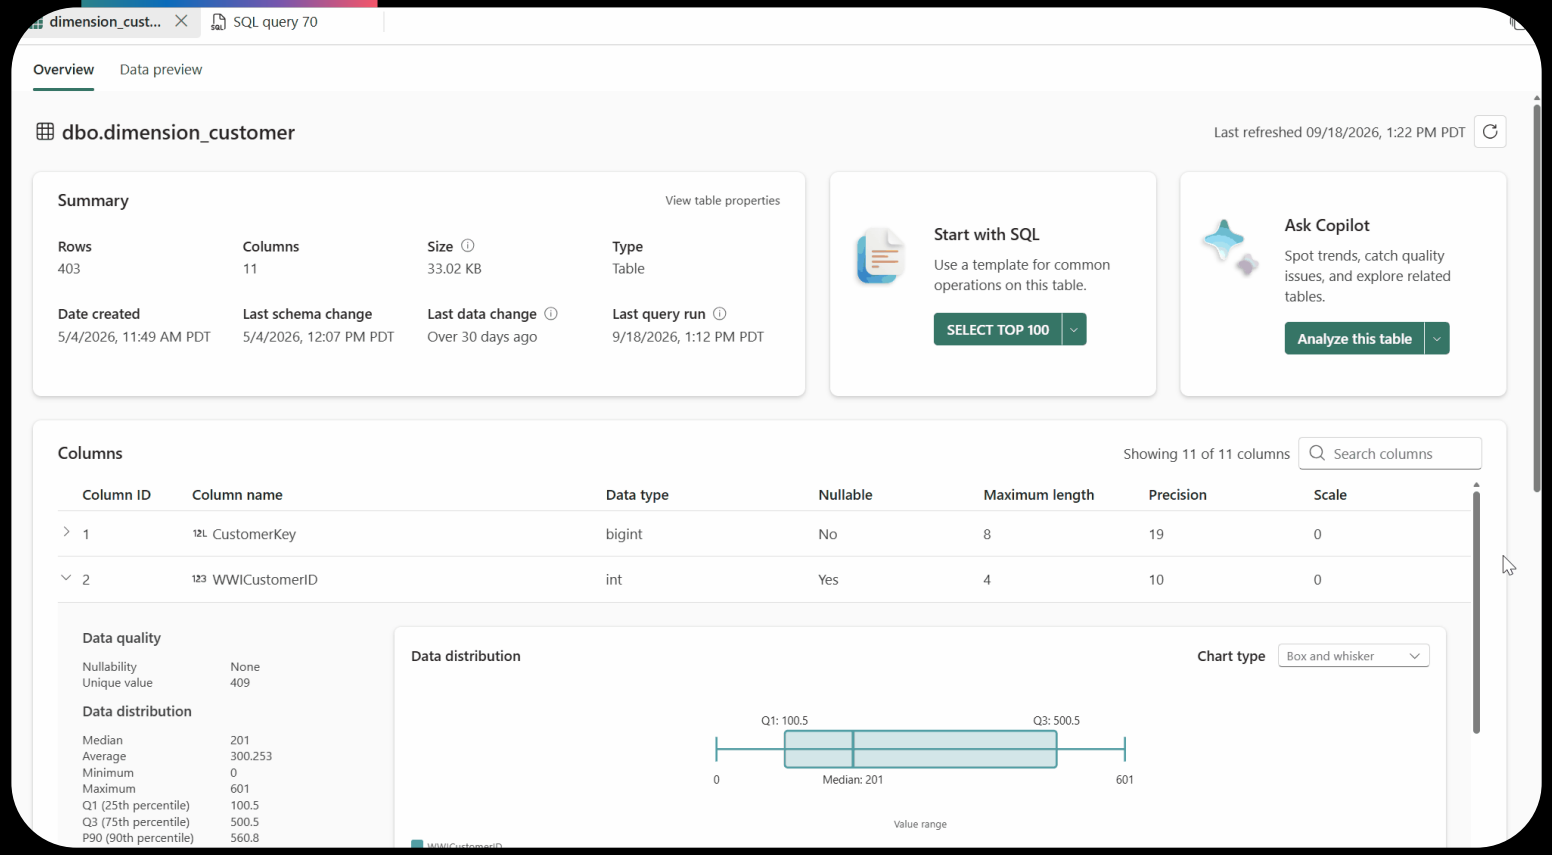

Serverless, auto-scaling compute for high concurrency

AI-powered operations for tuning, admin, maintenance

SQL Query Editor Enhancements

A richer, more visual home for all your warehouse development

Public preview

Detailed data profiles

Gauge a table's shape and state before you query

Visual schema design

Build and edit tables, columns, and keys, no SQL required

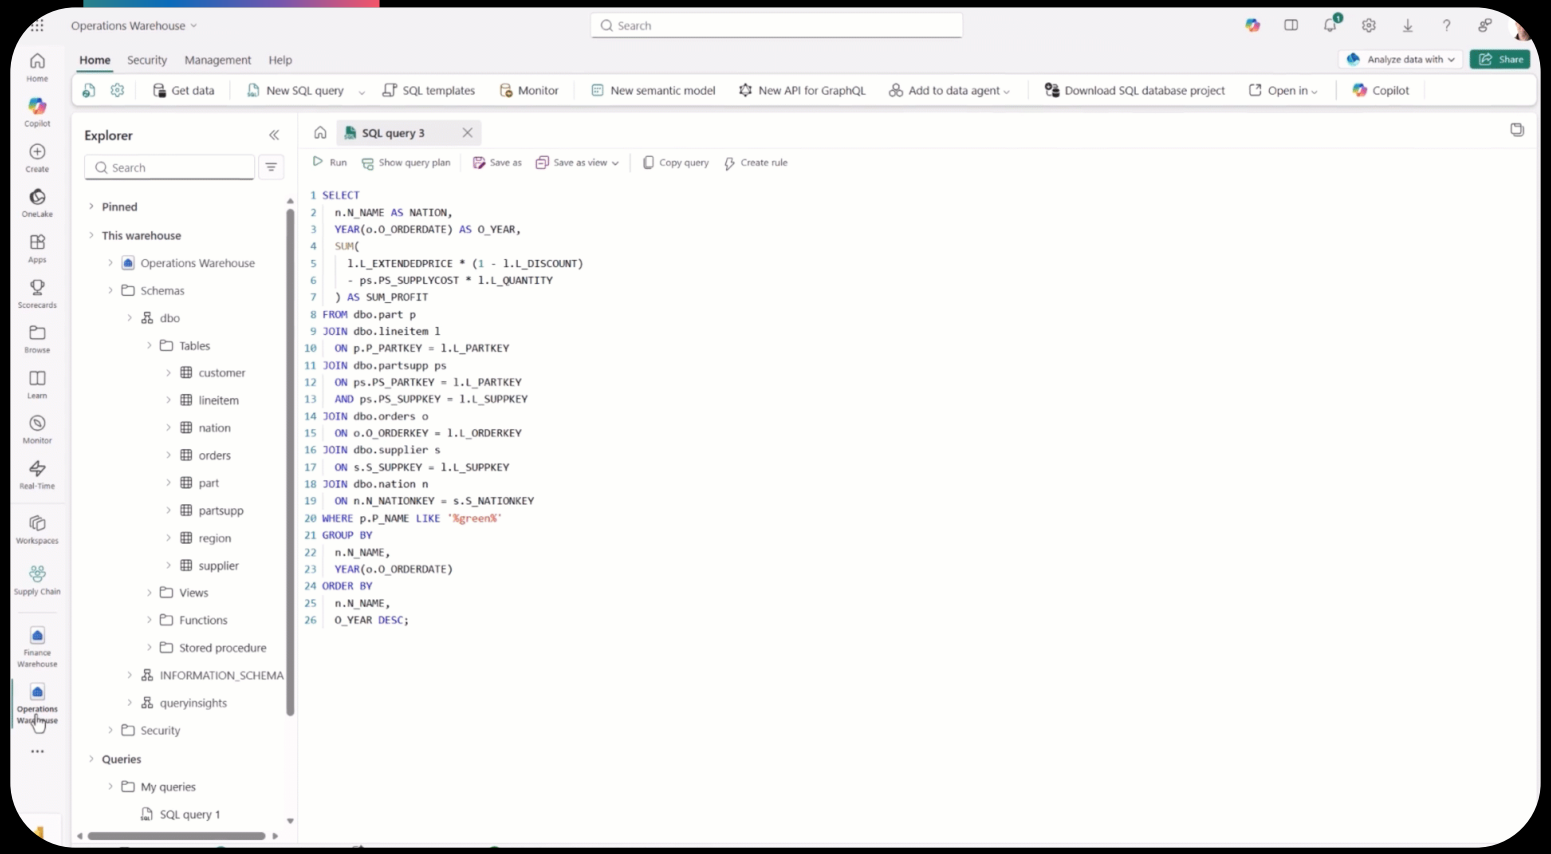

Charts on the fly

Turn raw query results into interactive visuals instantly

GPU-Accelerated Warehouse

Optimized for high-concurrency, AI-driven analytics workloads

Public preview

Faster insights

Run queries with dramatic speedup under concurrent load

Simple setup

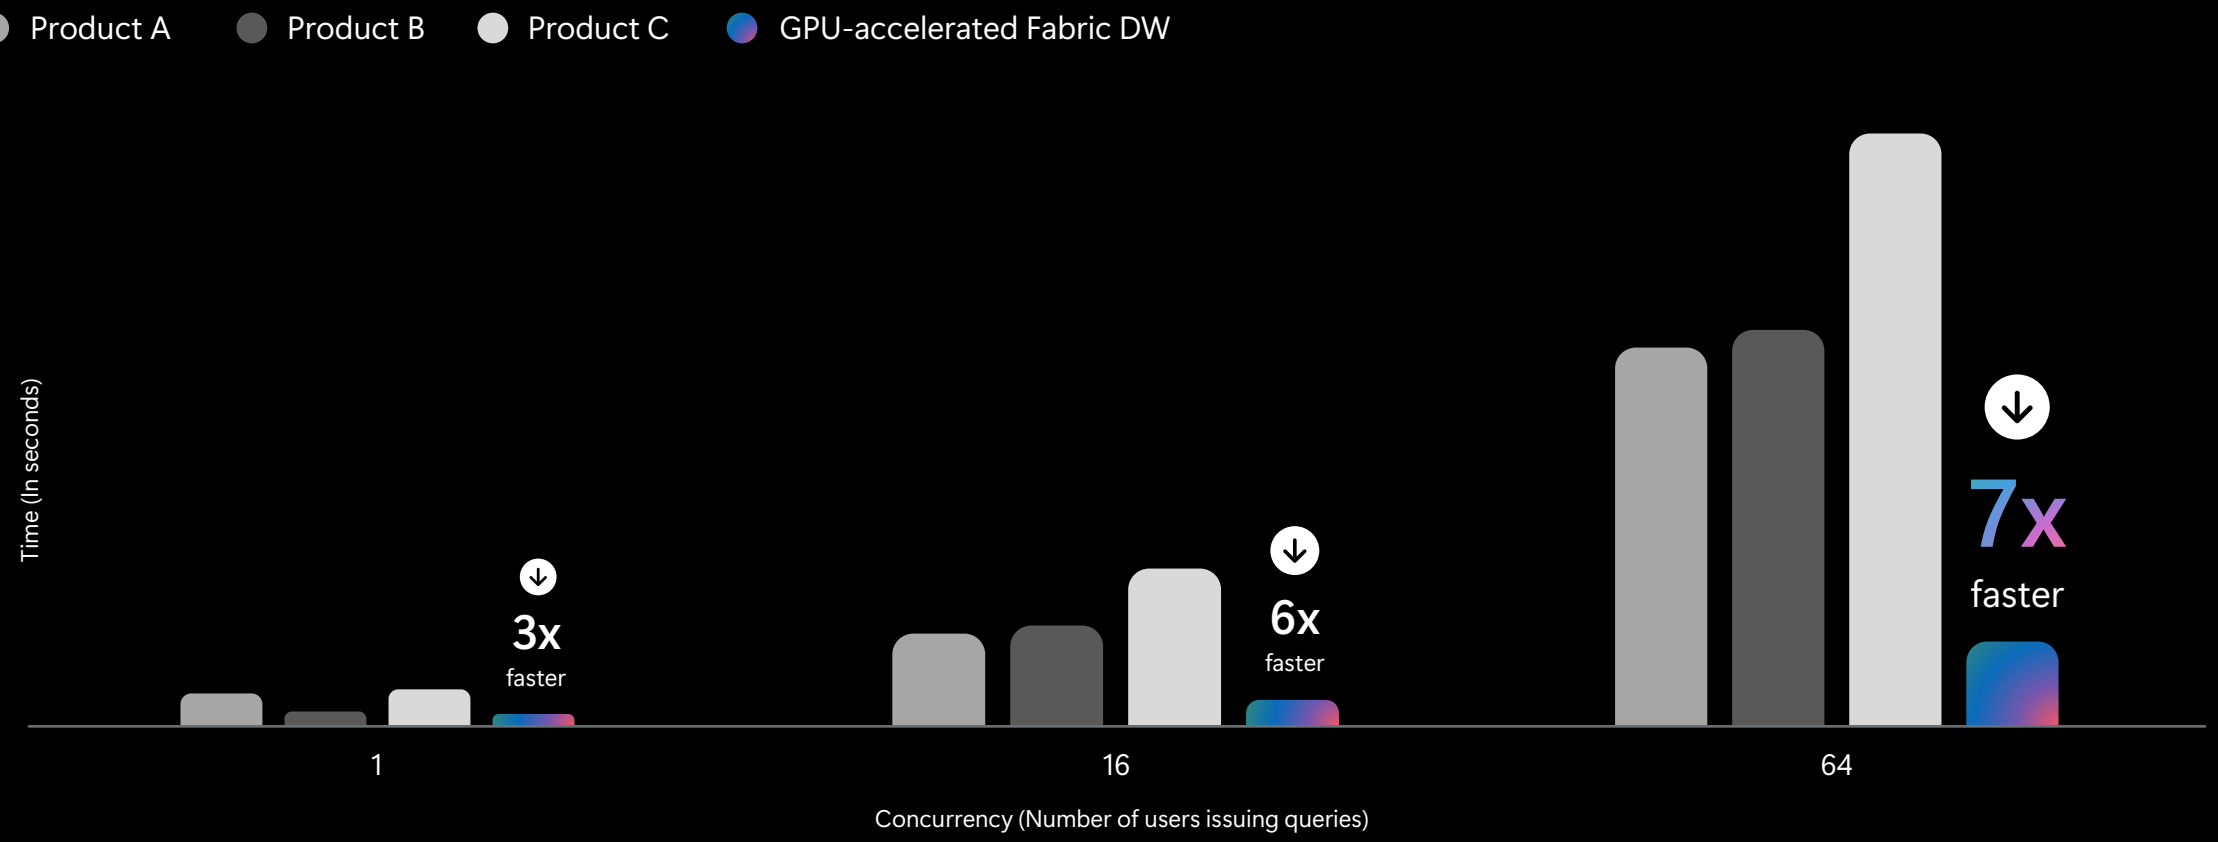

Turn on with one click and monitor from your warehouse

Made for AI workloads

Purpose-built for concurrent analytics and the demands of AI

GPU-Accelerated Warehouse Performance

TPC-H 300GB | Fabric vs. alternate warehouses

*Performance results are based on Microsoft internal testing conducted in May 2026 against three comparable data warehousing products from different companies in the same product space, using specific benchmark conditions. Actual results may vary depending on workload, configuration, and environment. Competitor identities and test configurations are not disclosed. These comparisons reflect selected commercially available products and may not be representative of all use cases.

What's Next for Power BI?

Modern Report Builder in Power BI

Agent-driven dashboards from the desktop, grounded in semantics you trust

Sneak peek

Prompt-based BI

Describe the dashboards you need and iterate instantly

Familiar tooling

Author where you already work, then publish straight to Fabric

Reports that do more

Collect inputs, write back data, and run operational workflows

Announcing

More Power for Power BI Pro

Build AI-powered dashboards with Fabric Apps and Fabric Databases

Agentic app development on models you already trust

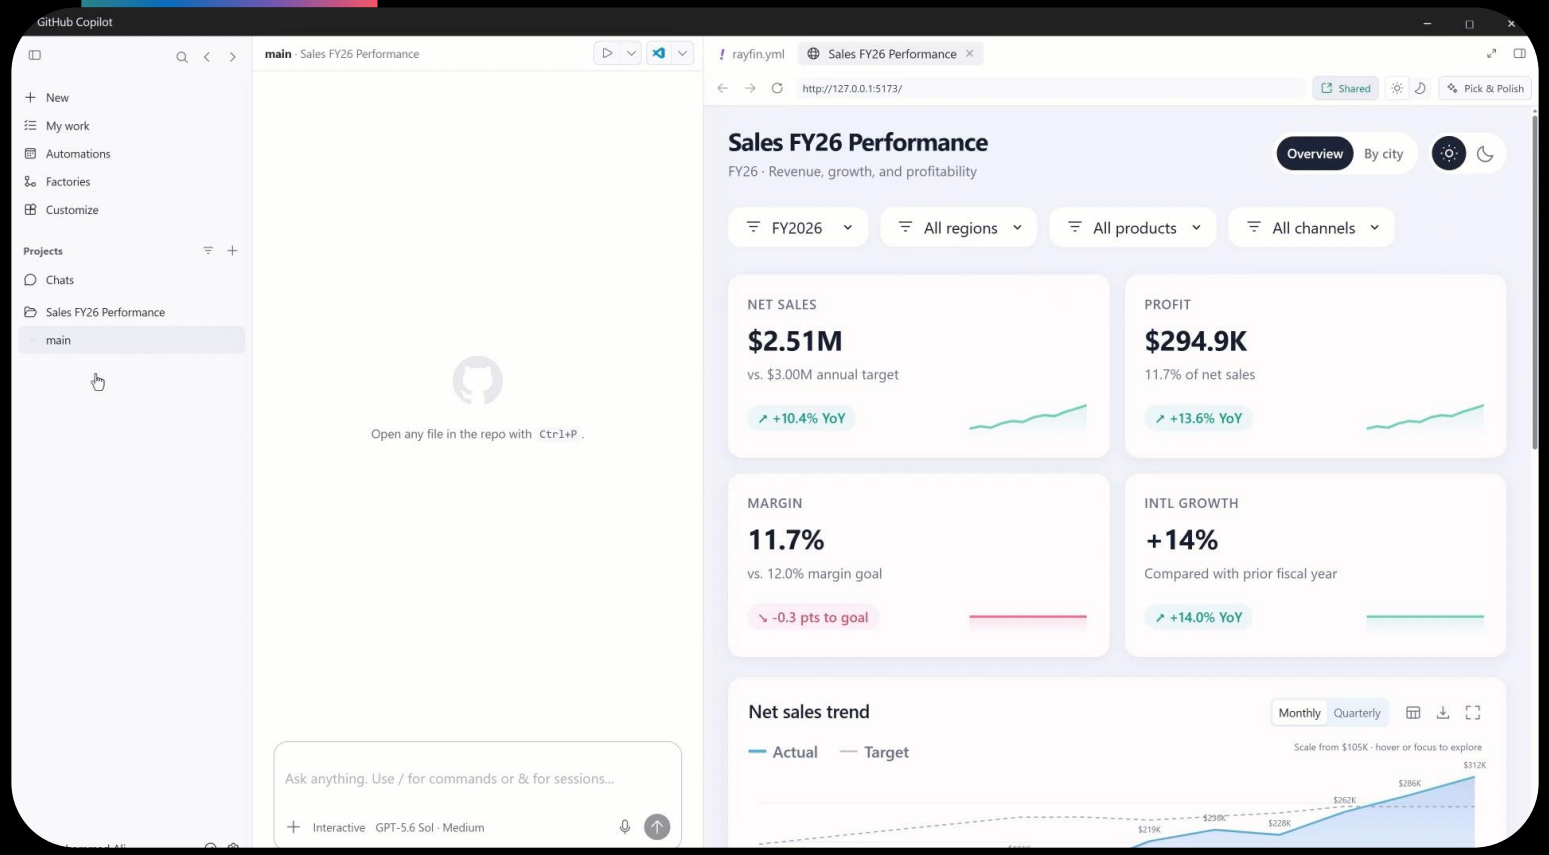

A managed SQL backend out of the box for every app

Coming soon to Fabric capacities, PBI Pro, and PPU

App Development in Fabric

Build production-ready apps directly on your governed data

Public preview

One integrated backend

Bring data, functions, storage, and hosting together on Fabric

Secure by default

Extend Entra identity and Fabric permissions to every app

New

Built-in observability

Monitor app usage, health, and performance right from launch

Create

Semantic model superpowers

Power BI Semantic Model

- Row- & object-level security (RLS / OLS)
- Time intelligence — YTD, YoY, rolling
- Custom & fiscal calendars (4-4-5)
- Ragged & parent-child hierarchies
- Calculation groups & User defined functions — reusable logic
- A full DAX calculation engine
- Many-to-many & bi-directional filters
- Field & what-if parameters
- Synonyms

Typical metrics layer

- Metrics & dimensions
- Basic joins
- Simple row filters
- SQL aggregations only

No governed security, time intelligence, or a real calculation engine.

Commitment to Apache Ossie

Incubating

Define semantic context once and reuse across agentic experiences across vendors

Collaboration with Snowflake to advance an open, interoperable semantic foundation for AI powered semantics
